M NeuraMeet

UI OVERVIEW · INTERACTIVE PROTOTYPE

NeuraMeet

The Development Workspace That Connects Conversations With Code.

AI-powered collaboration workspace linking what a team discusses, what its members are assigned, and what they actually implement in code — meetings, decisions, tasks, GitHub activity and project memory in one place.

Prepared for Waqas Irshad · 02 November 2026

1 · APPLICATION OVERVIEW

What NeuraMeet does

NeuraMeet connects project management, team collaboration, video meetings, AI meeting summaries, AI-proposed tasks, GitHub repositories and an AI project assistant. It is designed for software houses, professional development teams and university FYP teams.

Personal workspace

Dashboard, My Tasks, My Meetings, My Projects and Notifications show only data belonging to the signed-in user.

Project workspaces

Each project has its own Overview, Meetings, Tasks, Members, GitHub, Development Activity, Decisions, AI Assistant and Settings — project data never mixes.

Meetings → tasks

Meetings are recorded and transcribed; AI produces a summary, decisions and proposed tasks that a human reviews before creation.

Tasks → code

Tasks link to GitHub issues, commits and PRs. Webhooks move tasks to In Review on PR open and to Completed on merge, recording evidence.

AI project memory

The assistant answers questions from one project's meetings, decisions, tasks and GitHub records, citing every source.

Design

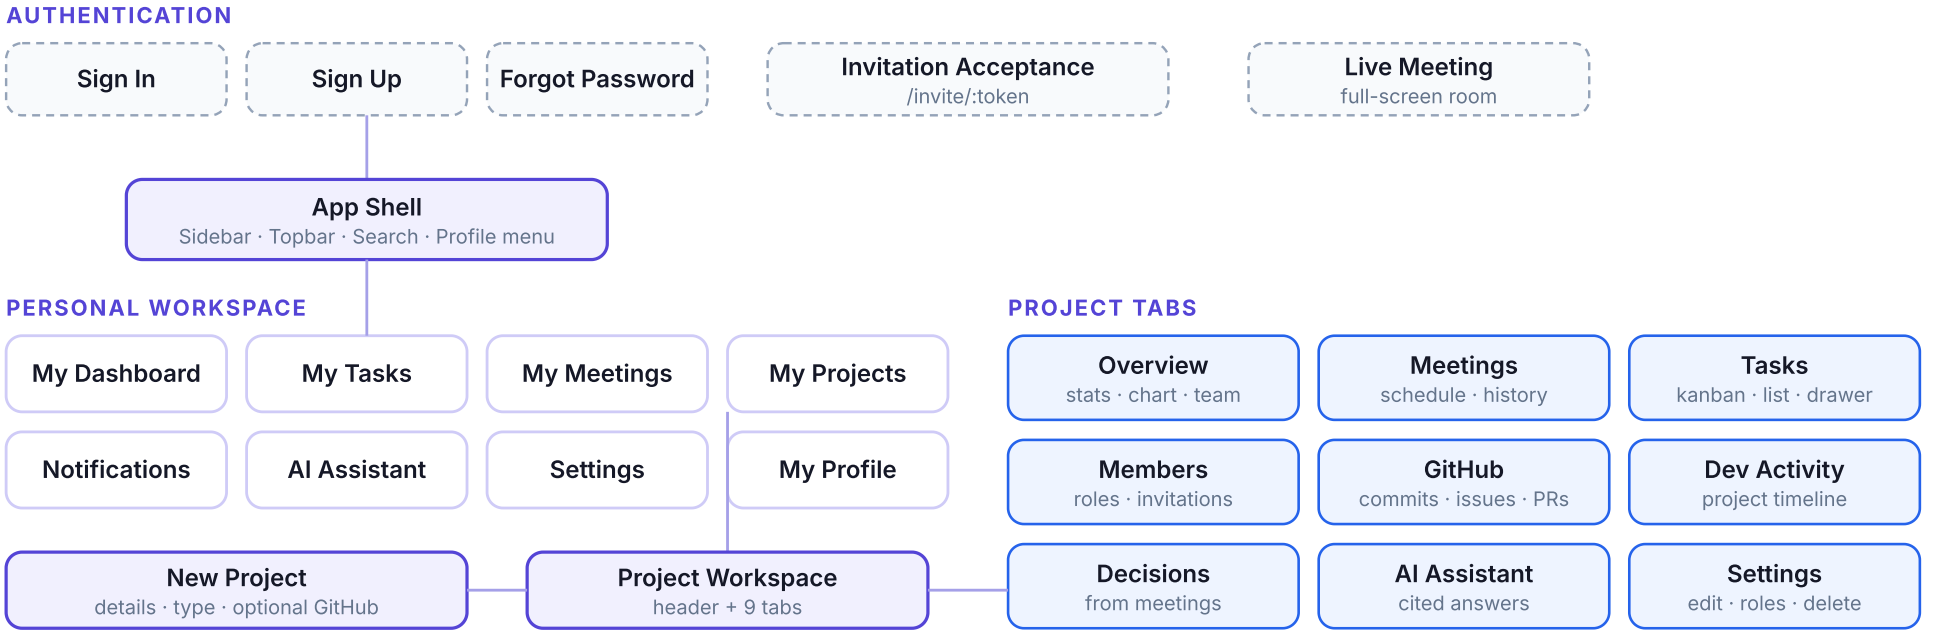

Light, professional SaaS style: deep indigo primary, blue secondary, off-white canvas, white cards, green/amber/red status colours. Desktop-first and responsive.

Sample environment

User Waqas Irshad (Owner) · Projects: E-Commerce Platform, NeuraMeet, AI Career Assistant · Team: Ali Hassan, Ahmed Khan, Sara Malik · Tasks such as Implement Login API (Issue #42, PR #51) and Fix Dashboard API (PR #48).

2 · SCREEN MAP

Screen hierarchy & navigation

KEY WORKFLOWS

Meetings	Schedule	Live Meeting	AI Summary	Action Items	Tasks created
Tasks	Task drawer	Assign	Status / drag	Comments	Evidence
GitHub	Issue	Commit (webhook)	Pull request	Review	Merge → Done
Invites	Add Members	Email / Link	Pending	Accept / Approve	Member

3 · MAIN NAVIGATION

Navigation structure

AREA	ITEMS	NOTES
Sidebar	My Dashboard · My Tasks · My Meetings · My Projects · Notifications · AI Assistant · (bottom) Settings · User Profile	Collapsible to icons; project shortcuts listed; unread and open-task counts.
Top header	Breadcrumbs · Global search (Ctrl K) · Notifications · Help · Avatar menu	Search covers only the user's projects, tasks, meetings and decisions.
Profile menu	My Profile · Account Settings · Connected Accounts · Sign Out	
Project header	Name, description, status, owner, members, GitHub status · Add Member · Schedule Meeting · More	More: project settings, copy link, sync GitHub, leave project.
Project tabs	Overview · Meetings · Tasks · Members · GitHub · Development Activity · Decisions · AI Assistant · Settings	Each tab is scoped to that project only.
Standalone	Sign In / Sign Up / Forgot Password · Invitation Acceptance · Live Meeting	Full-screen, outside the app shell.

4 · MAIN USER JOURNEYS

Required user flows

A	**New Project**	My Dashboard → New Project → enter details → optionally connect GitHub → Create Project → success screen → Project Workspace
B	**Invite Members**	Project → Members → Add Members → email or invitation link → Send / Copy → pending invitation appears → invitee accepts → becomes member
C	**Project Meeting**	Project → Meetings → Schedule Meeting → date & participants → Save → appears in Upcoming → Join → End Meeting → AI Summary
D	**Meeting to Tasks**	Meeting Details → AI Summary → Action Items → review → edit → confirm → developers assigned → tasks in Project Tasks and in each assignee's My Tasks
E	**Developer Work & GitHub**	My Tasks → open task → linked issue → commit pushed (webhook) → activity shown → PR opened → reviewed & merged → issue closed → completion evidence updated
F	**Personal Workspace**	Sign In → My Dashboard → My Projects → My Tasks → My Meetings → Notifications → open a project
G	**AI Project Assistant**	Open project → AI Assistant → ask question → answer with sources → click source → corresponding meeting / task / PR opens

Project workflow

Create project → **invite members** → **schedule meeting** → **meet** (recorded & transcribed) → **AI summary, decisions, proposed tasks** → **human review & assignment** → **developers work** (issue, commits, PR) → **review & merge** → **task completed with evidence** → **AI assistant** answers questions across all of it with cited sources.

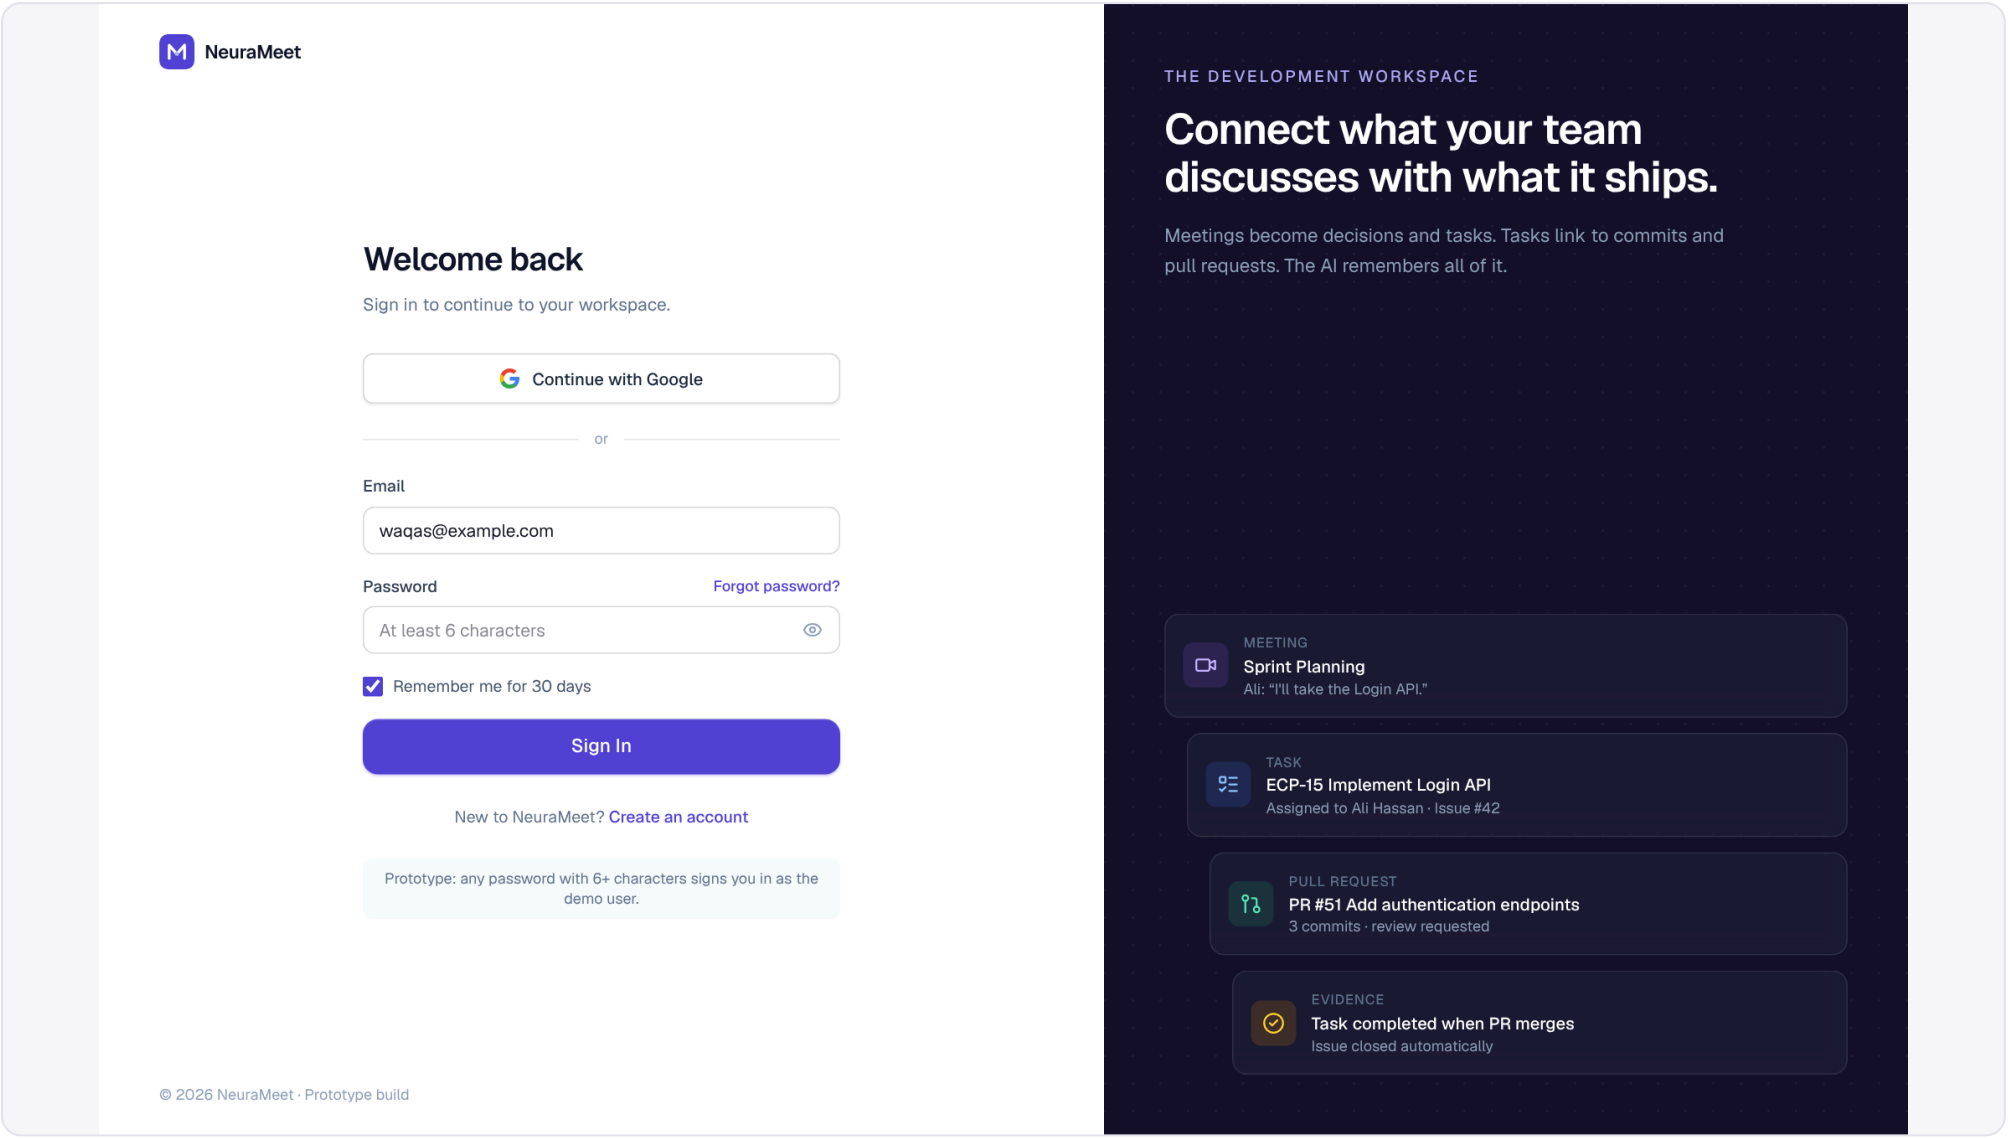

5 · SCREENS

Screenshots of important screens

21 screens from the working prototype, in the order a user typically meets them.

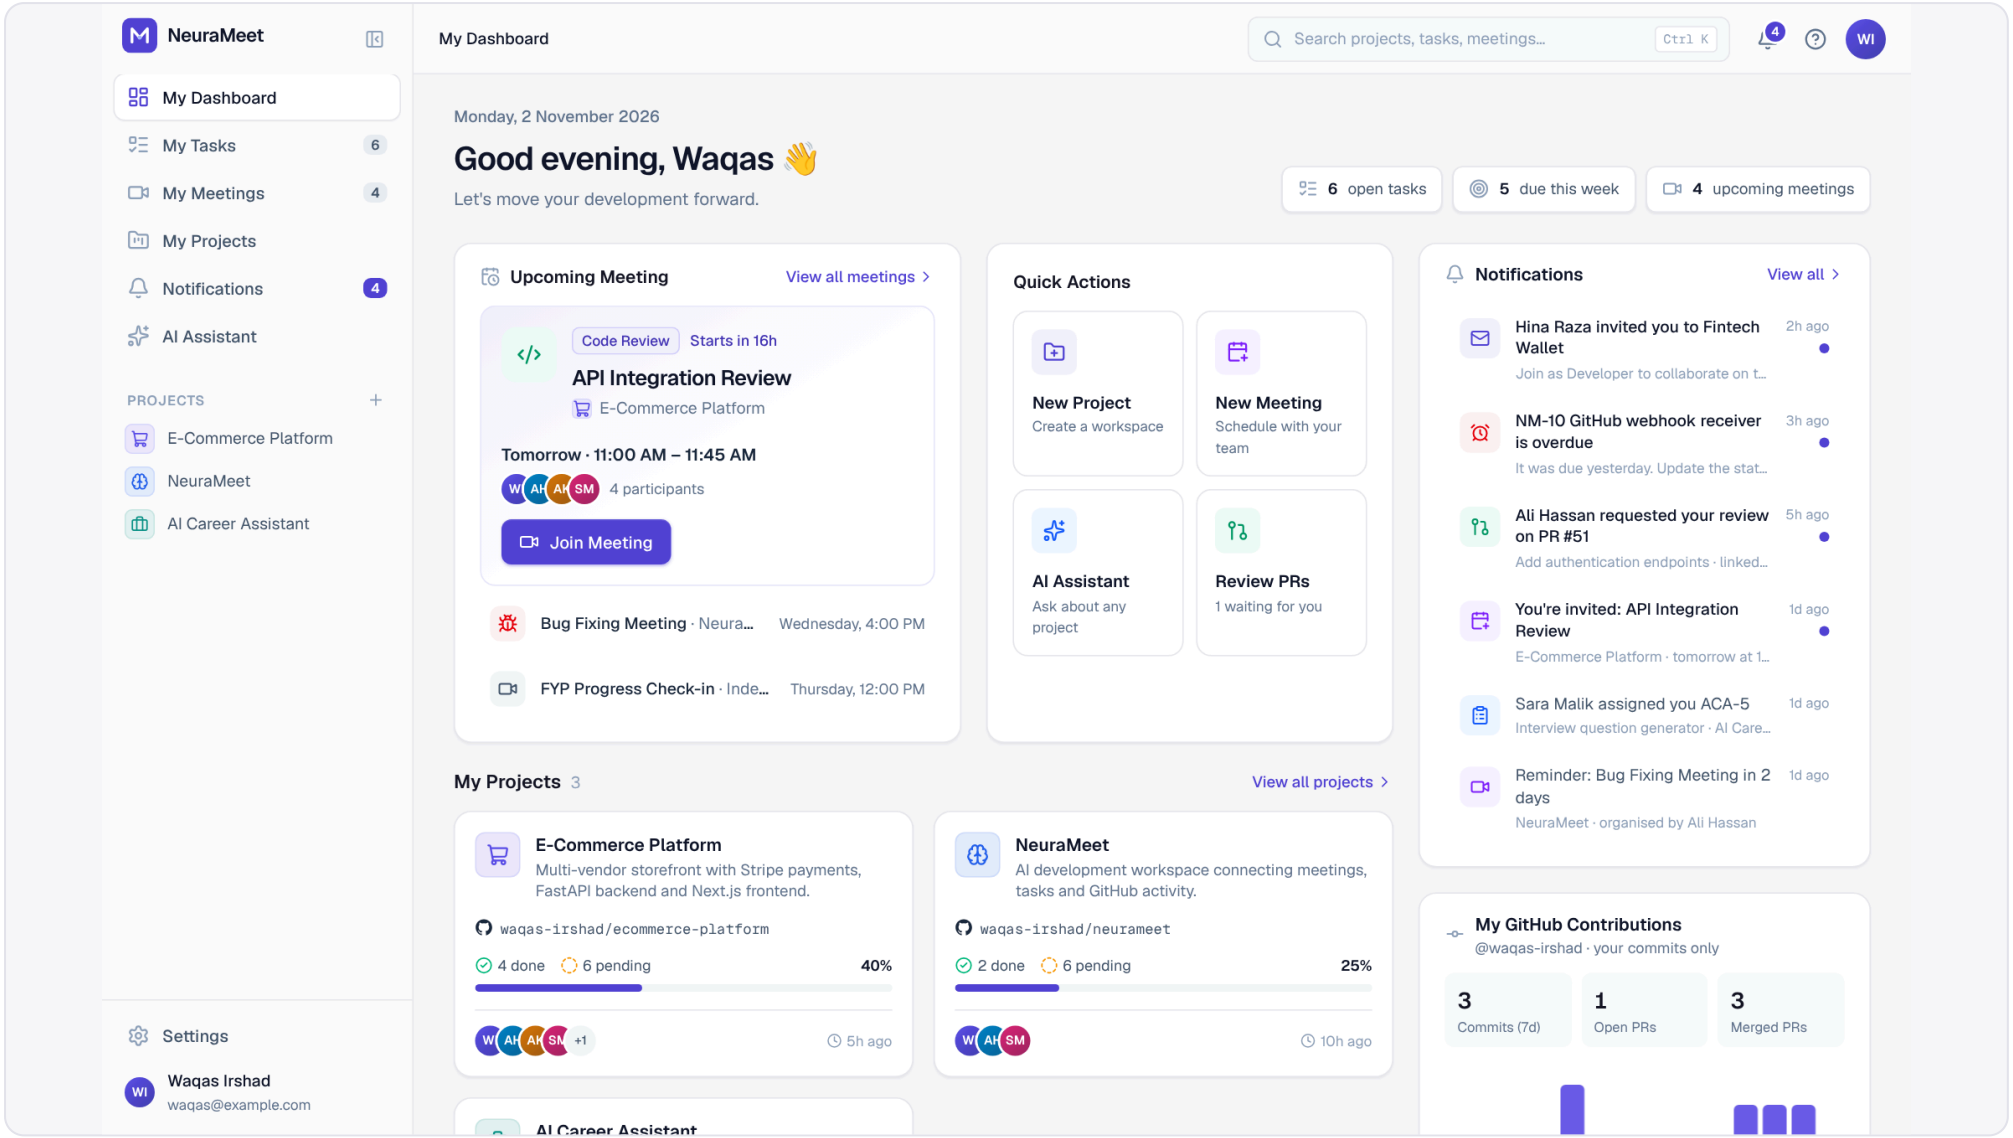

01 Sign In

Email/password with show-hide, remember me, forgot password, Google sign-in and link to Sign Up. Sign Up and Forgot Password screens follow the same layout.

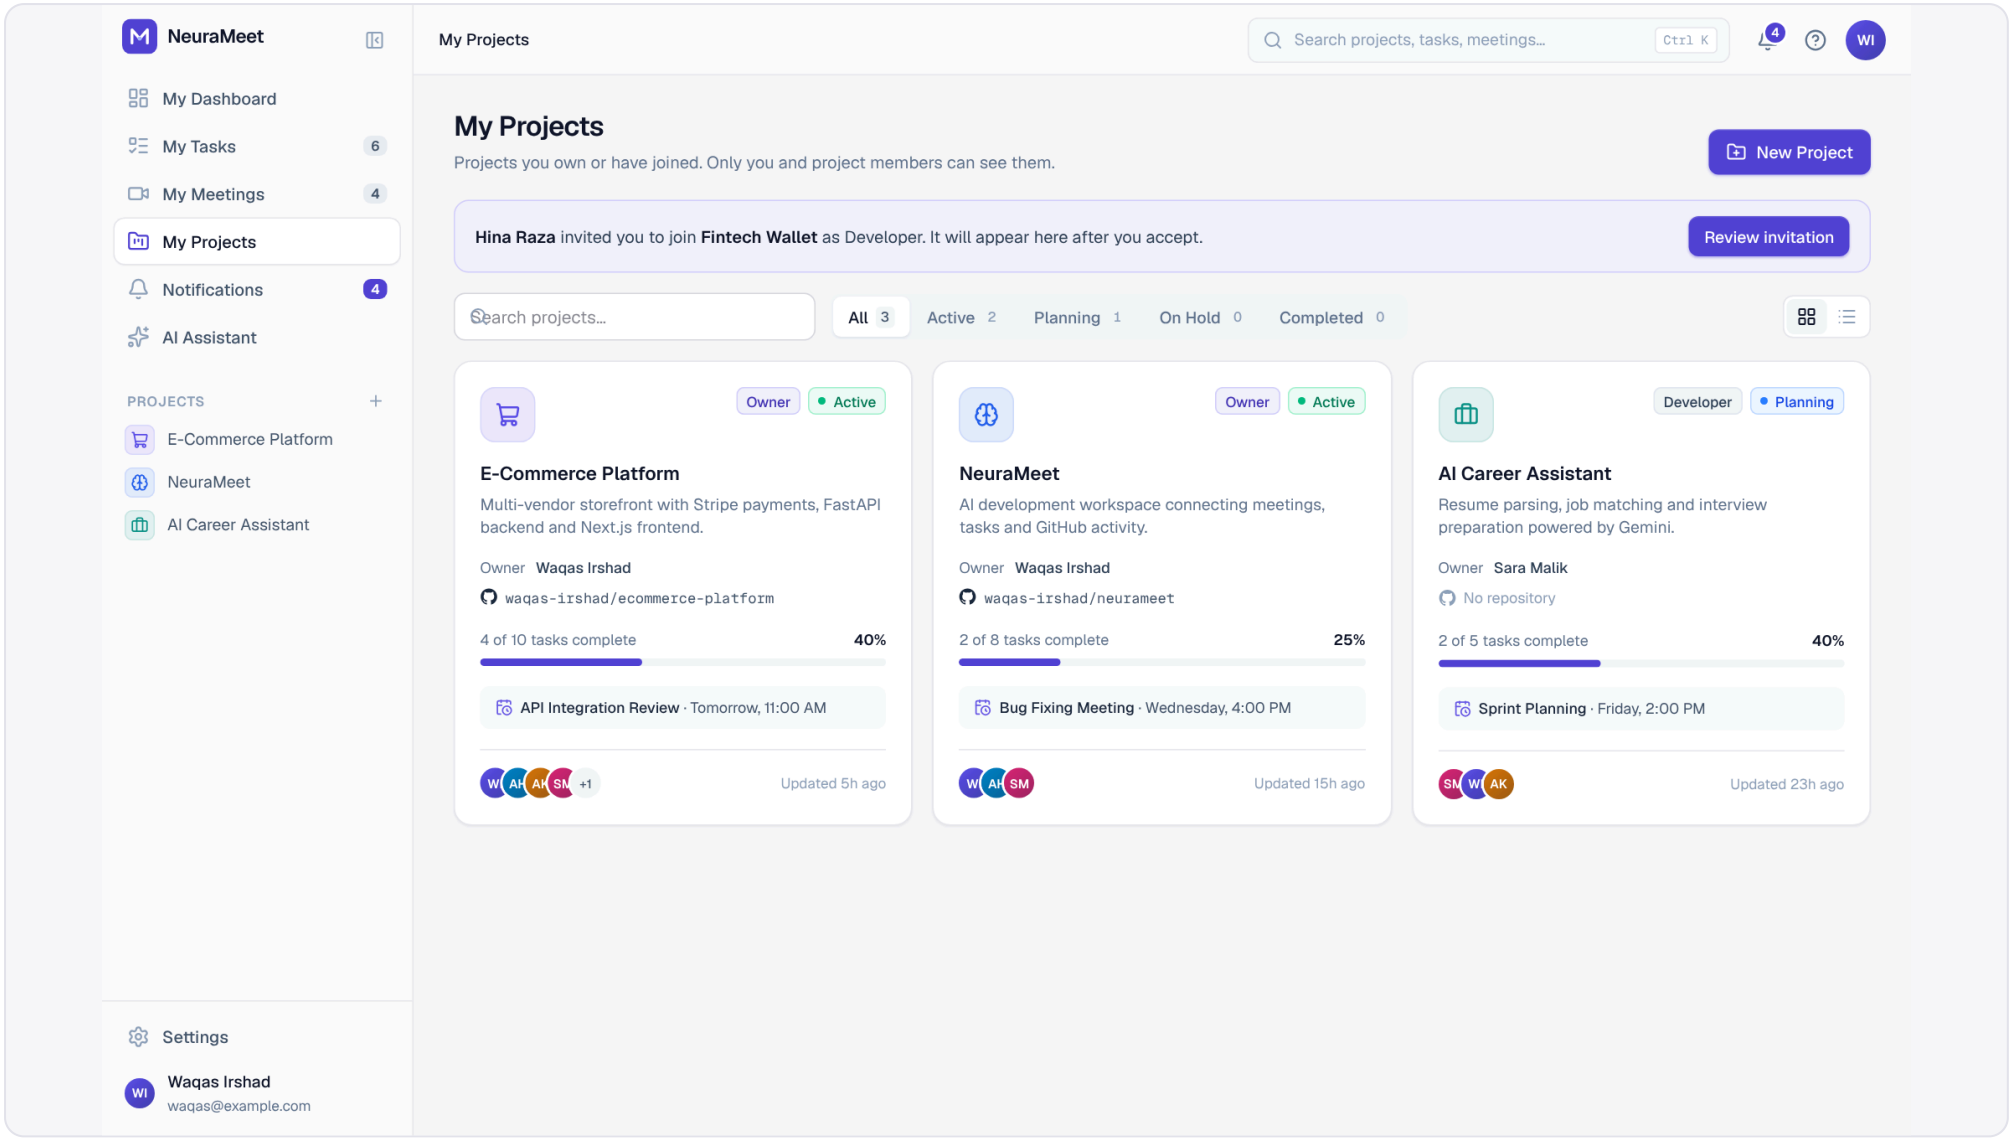

02 My Dashboard

Personalised to the signed-in user only: next meeting with Join button, quick actions, my projects, my focus tasks with status filters, personal notifications and my own GitHub contributions. No global activity feed.

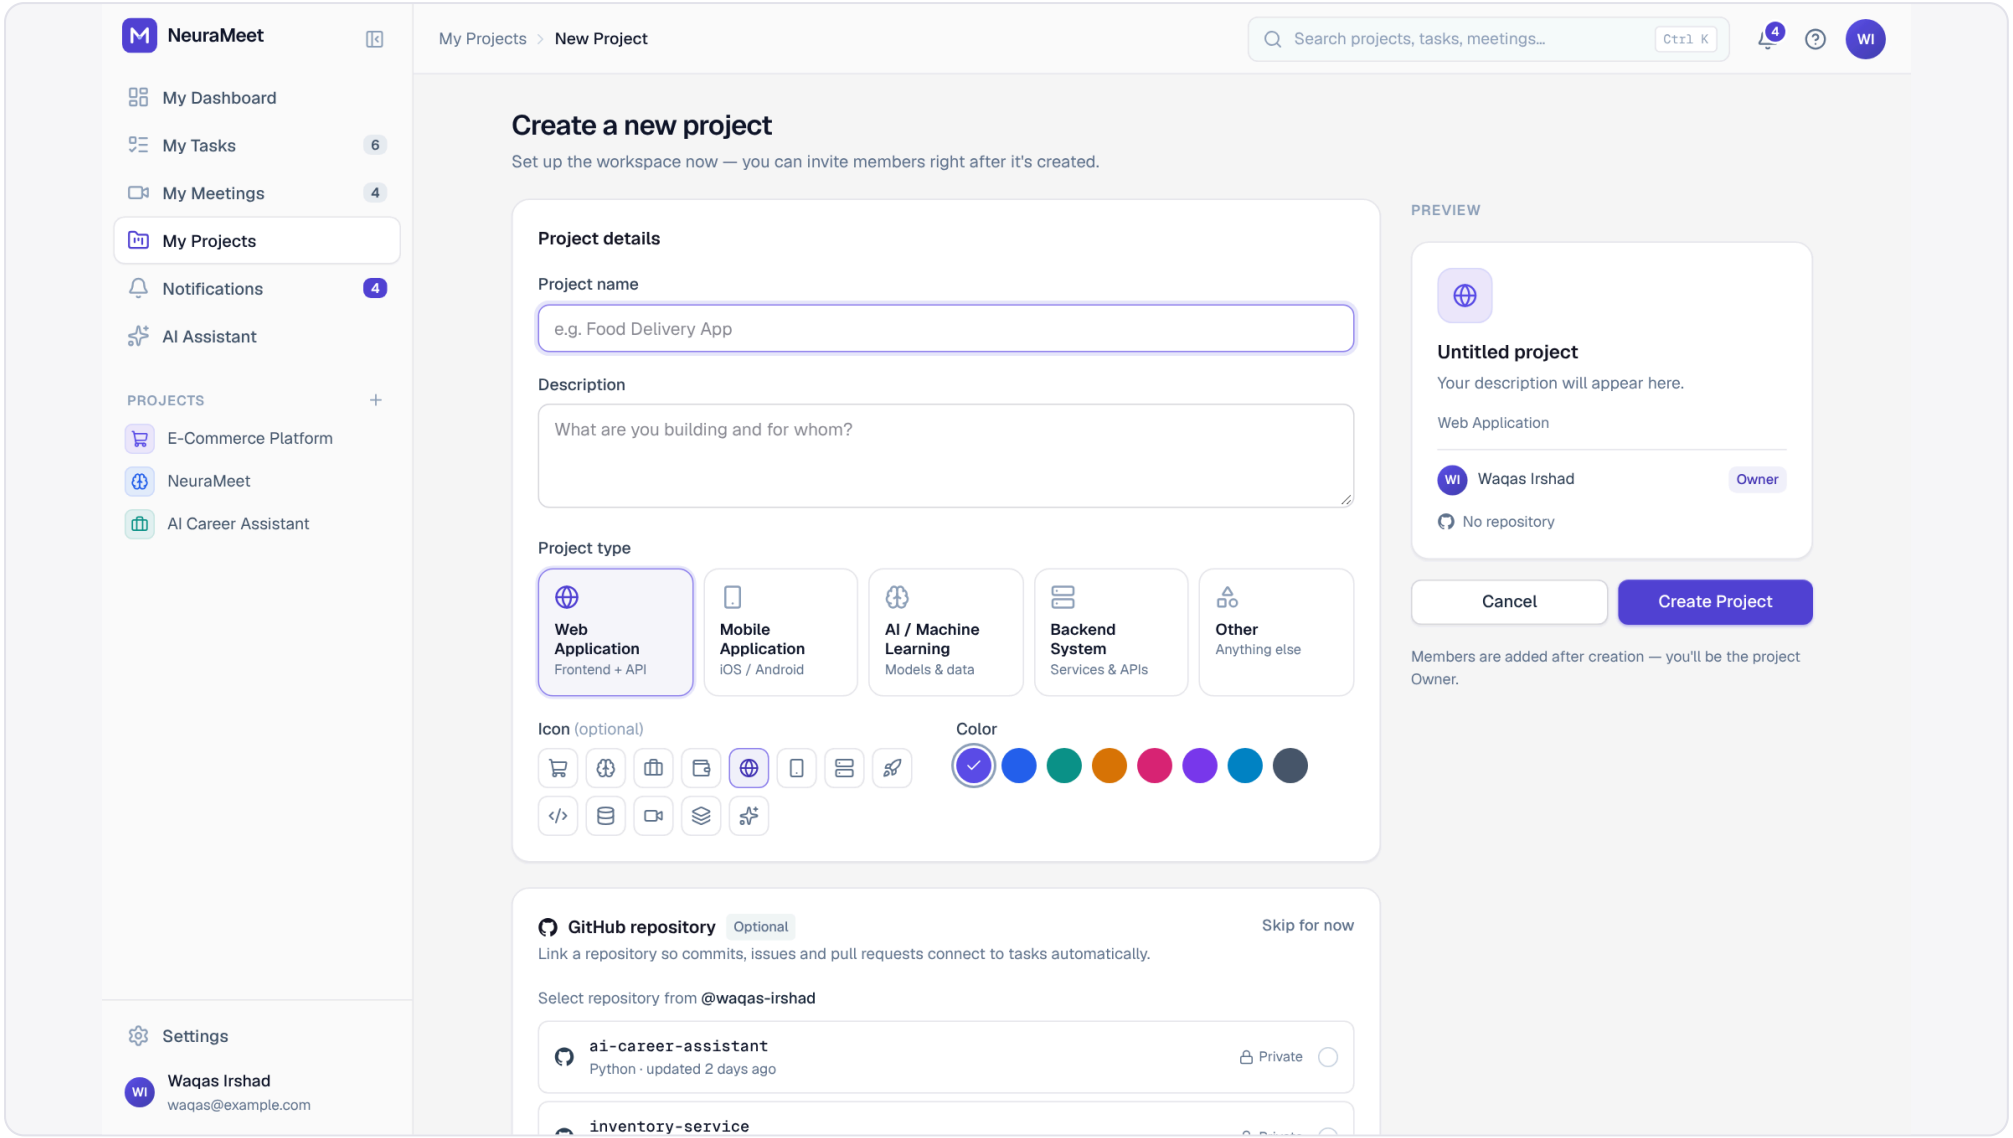

03 My Projects

Only projects the user belongs to. Search, status filter, grid/list toggle, New Project button and a banner for pending invitations.

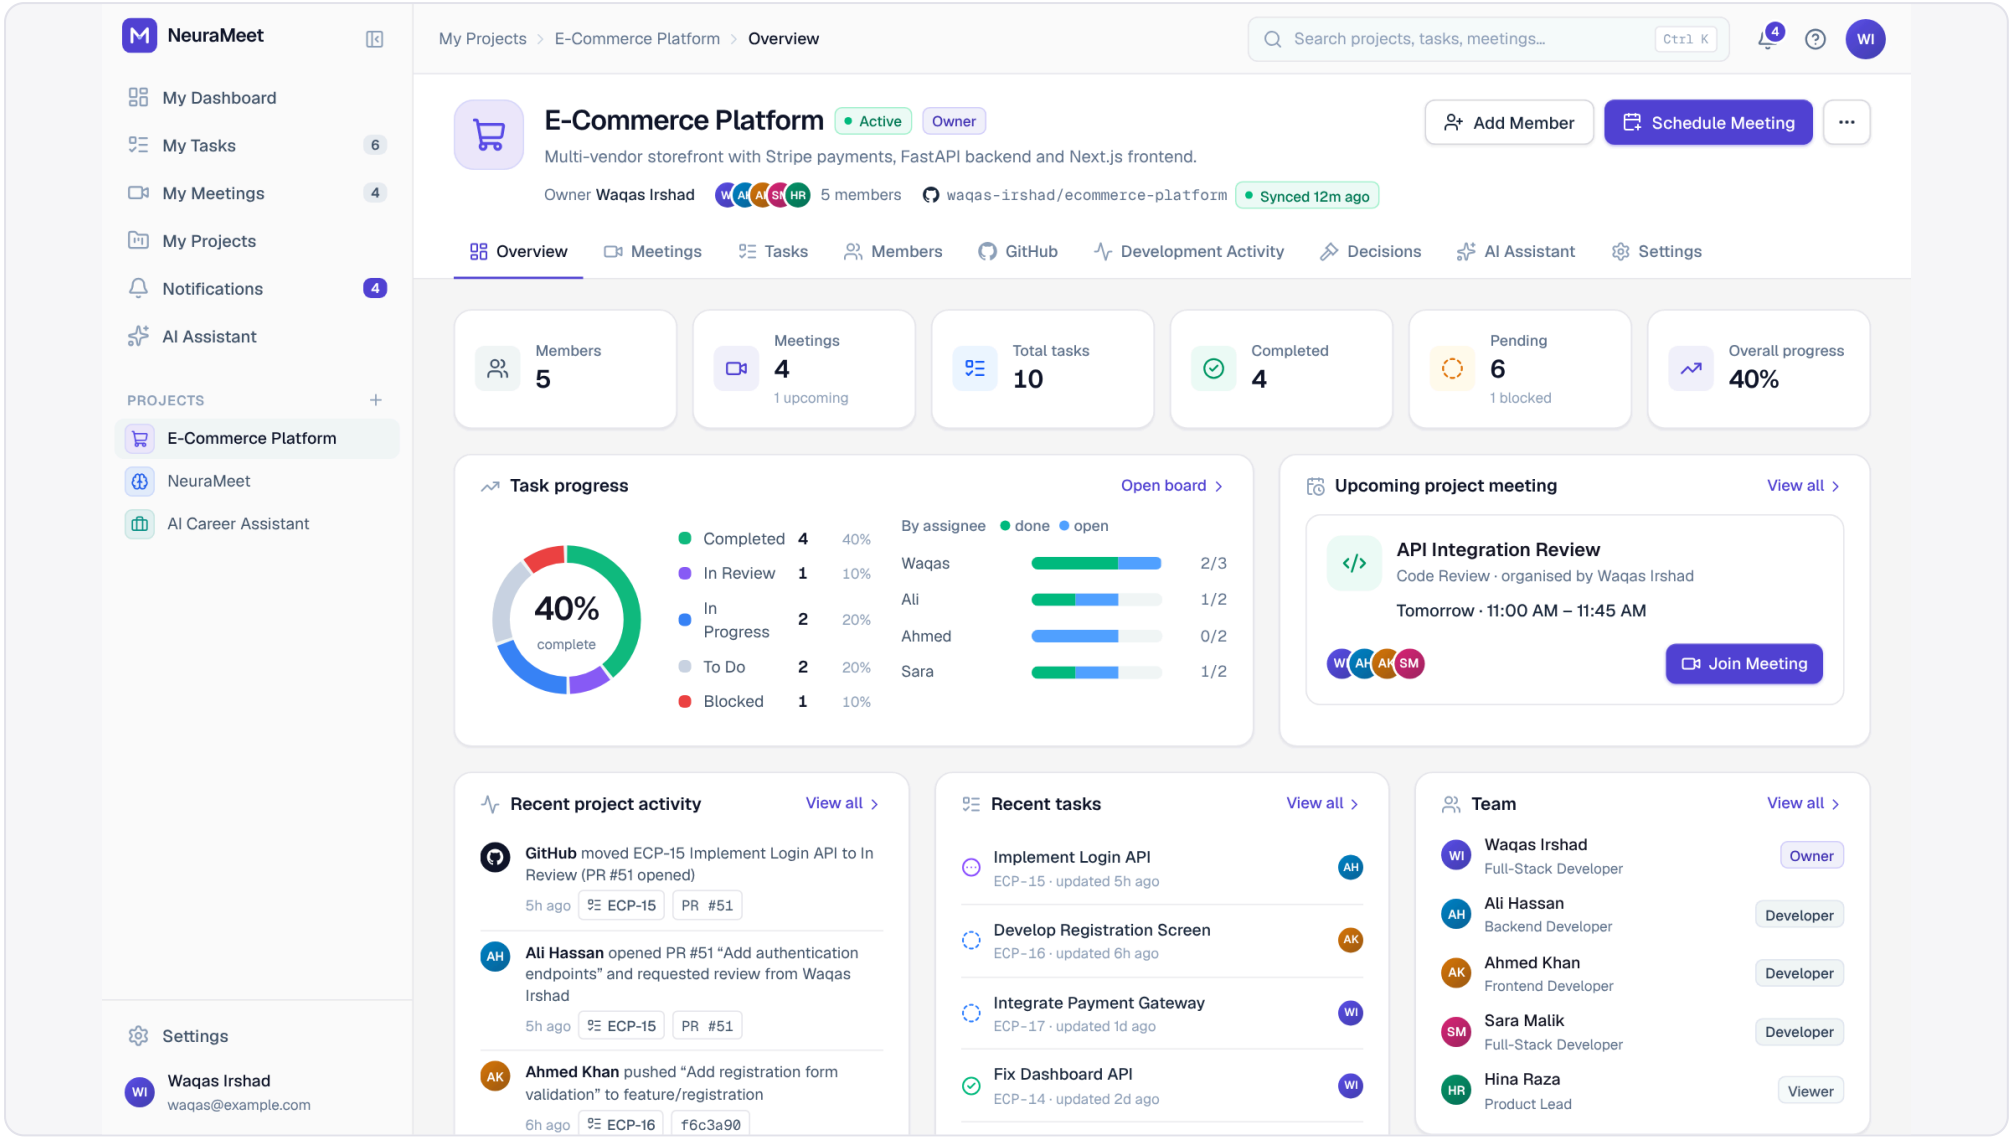

04 Create New Project

Name, description, project type, icon and colour, optional GitHub repository (connect, select repo, preview or skip). Members are added after creation; the creator becomes Owner.

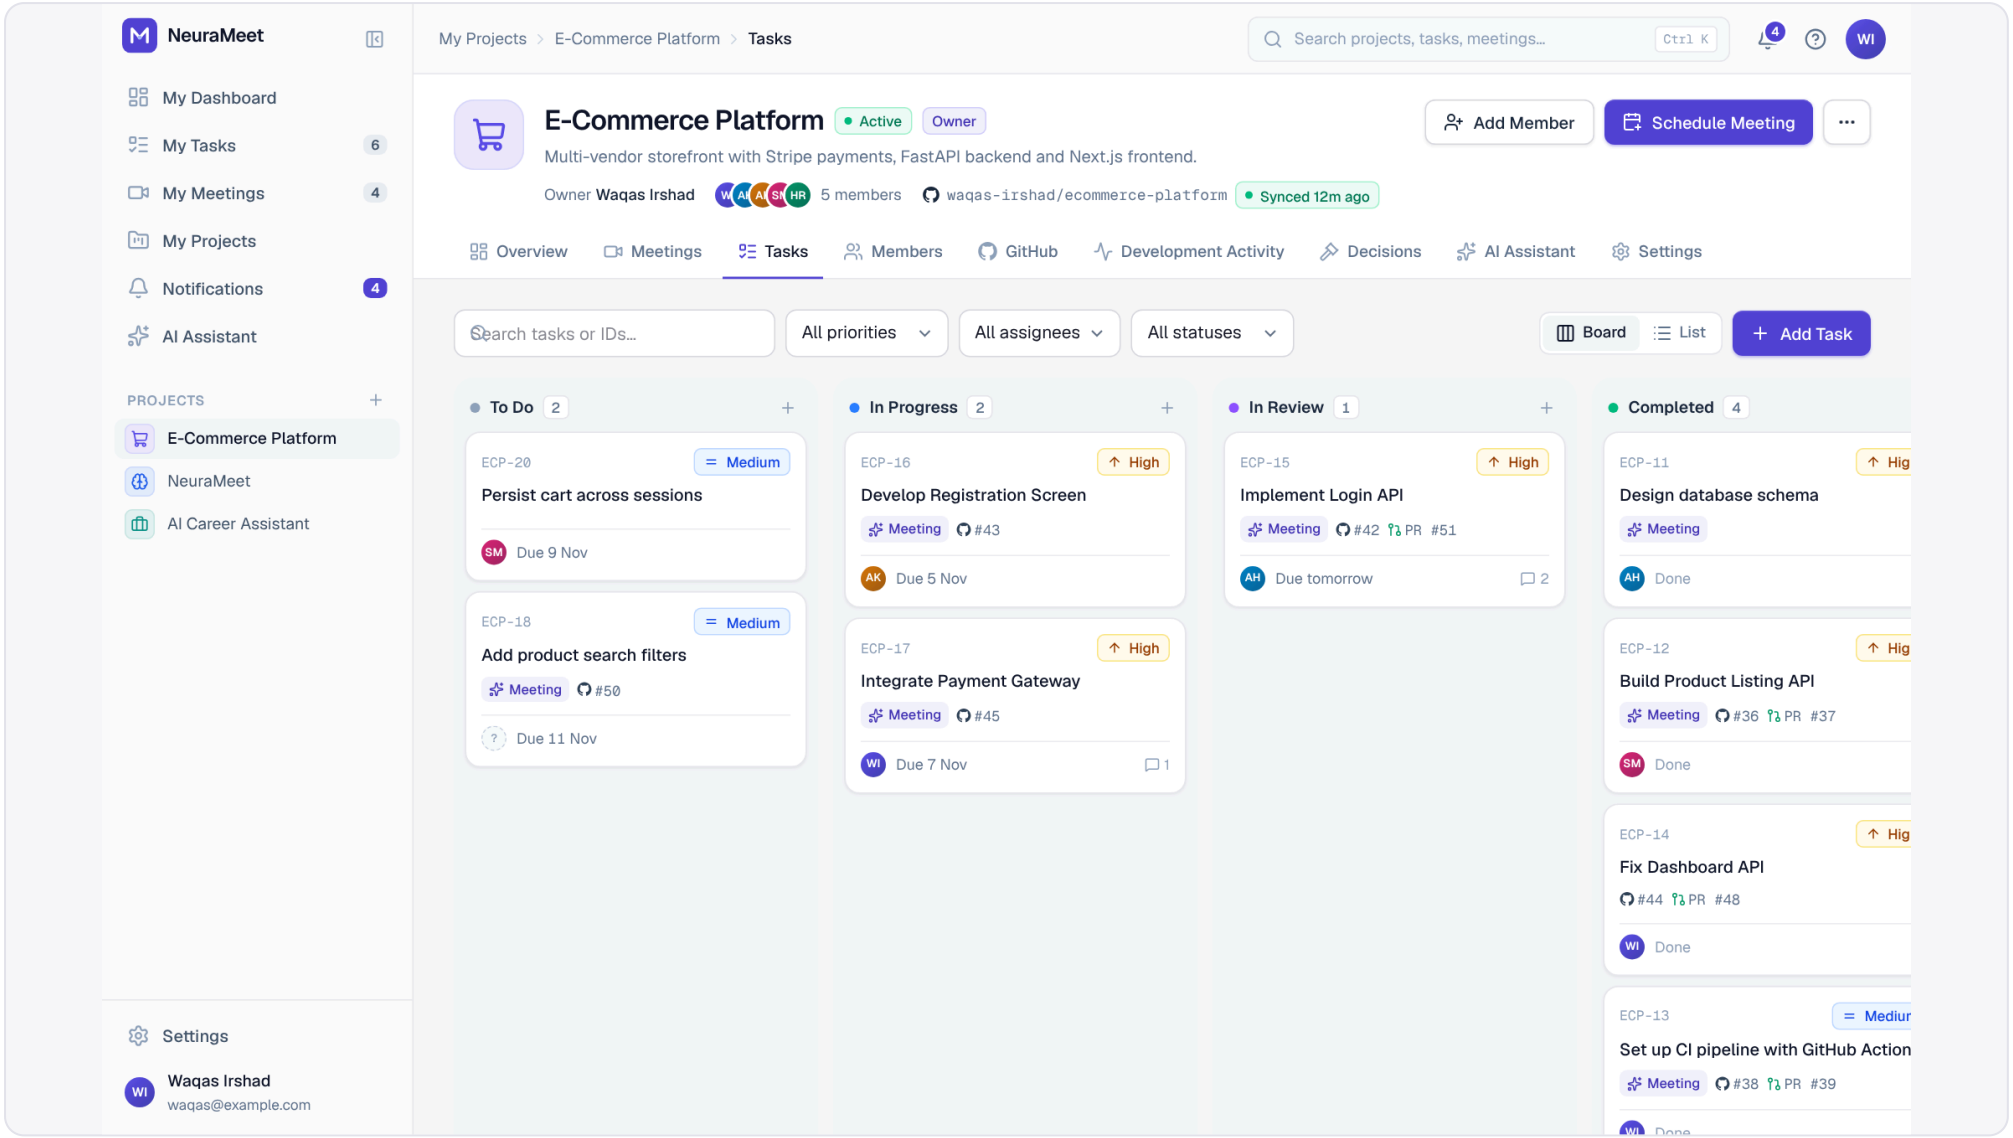

05 Project Workspace · Overview

Project header (status, owner, members, GitHub status, Add Member, Schedule Meeting, more menu) and nine project tabs. Stats, progress chart, next meeting, recent activity, recent tasks, team and repository card.

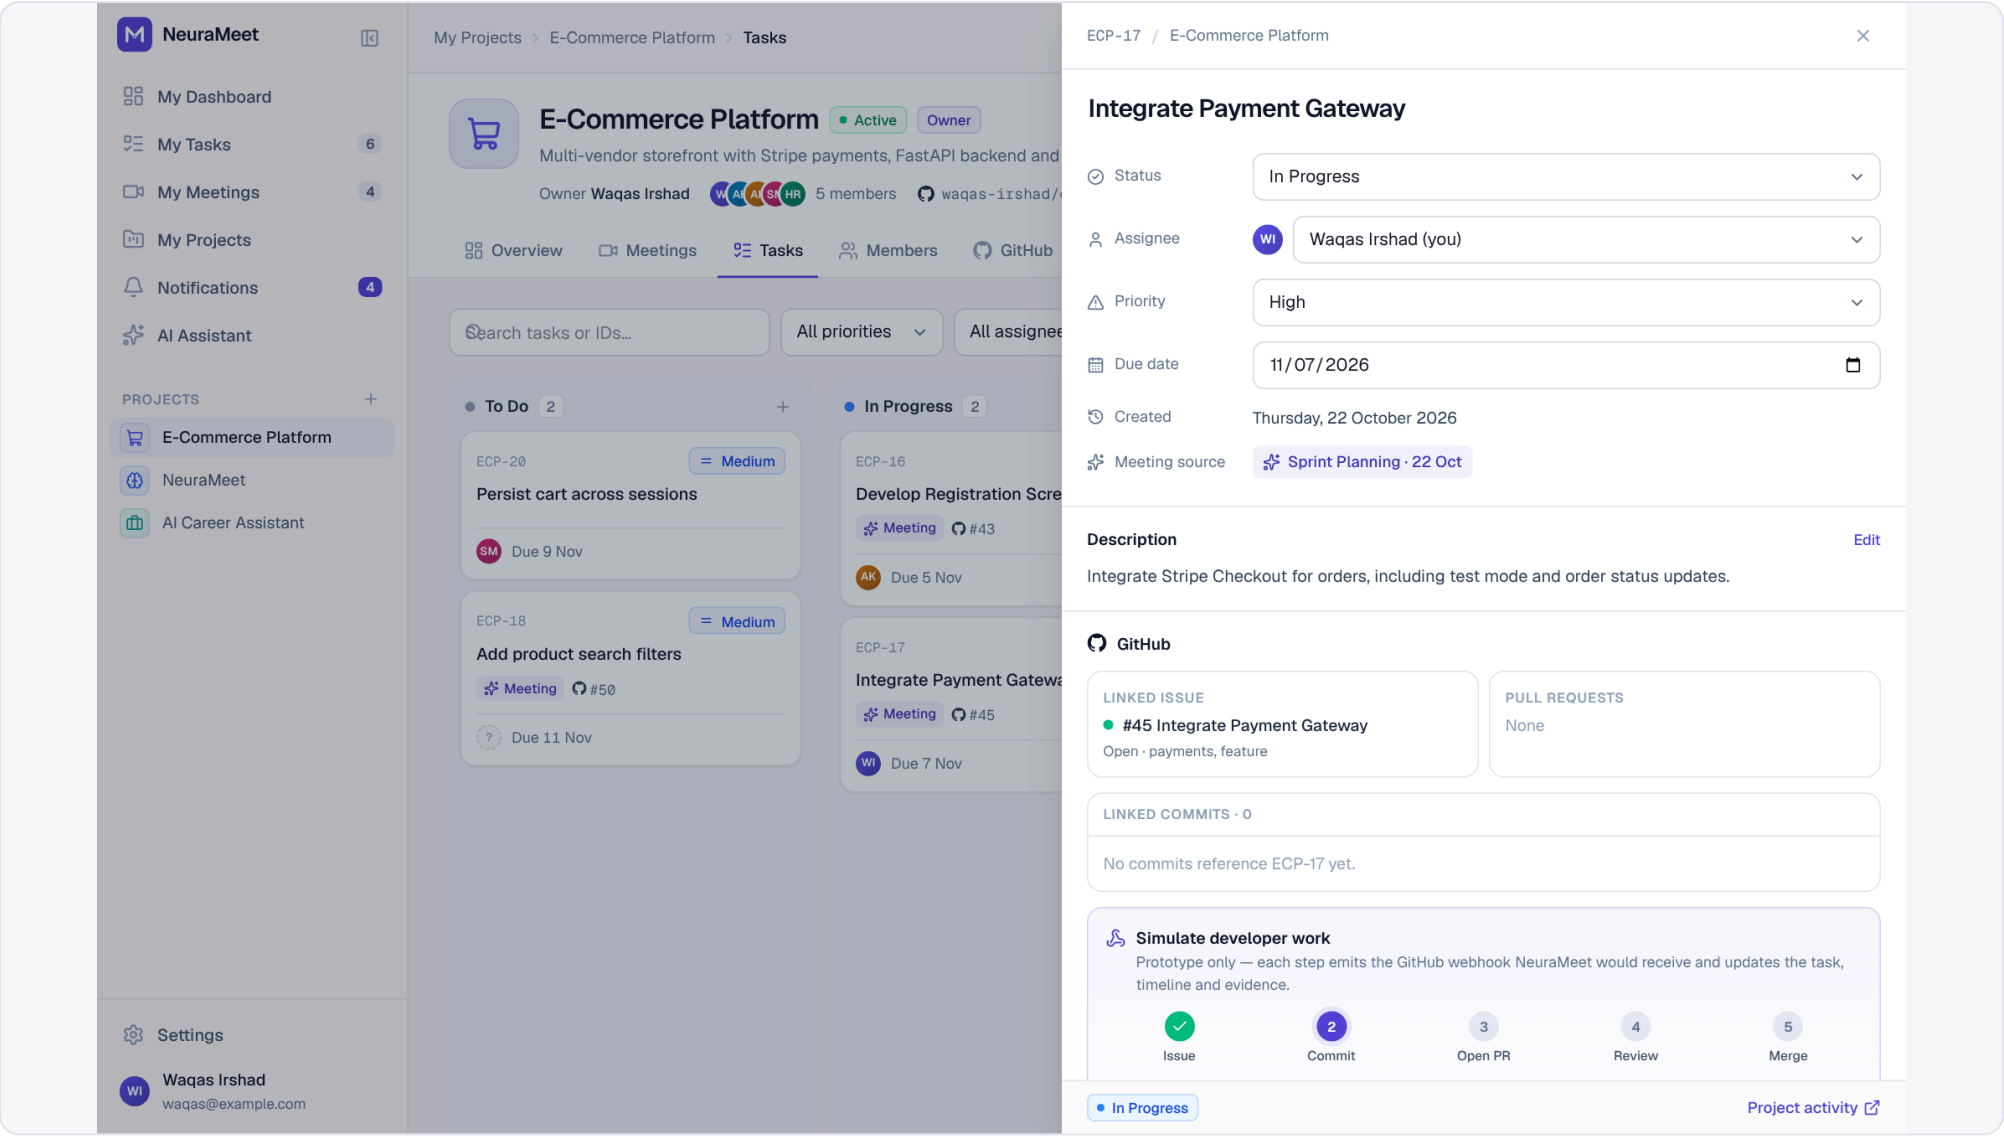

06 Project Tasks · Kanban

To Do, In Progress, In Review, Completed and Blocked columns with drag-and-drop. Search, priority, assignee and status filters, list view and Add Task. Cards show ID, assignee, priority, due date, meeting source and GitHub refs.

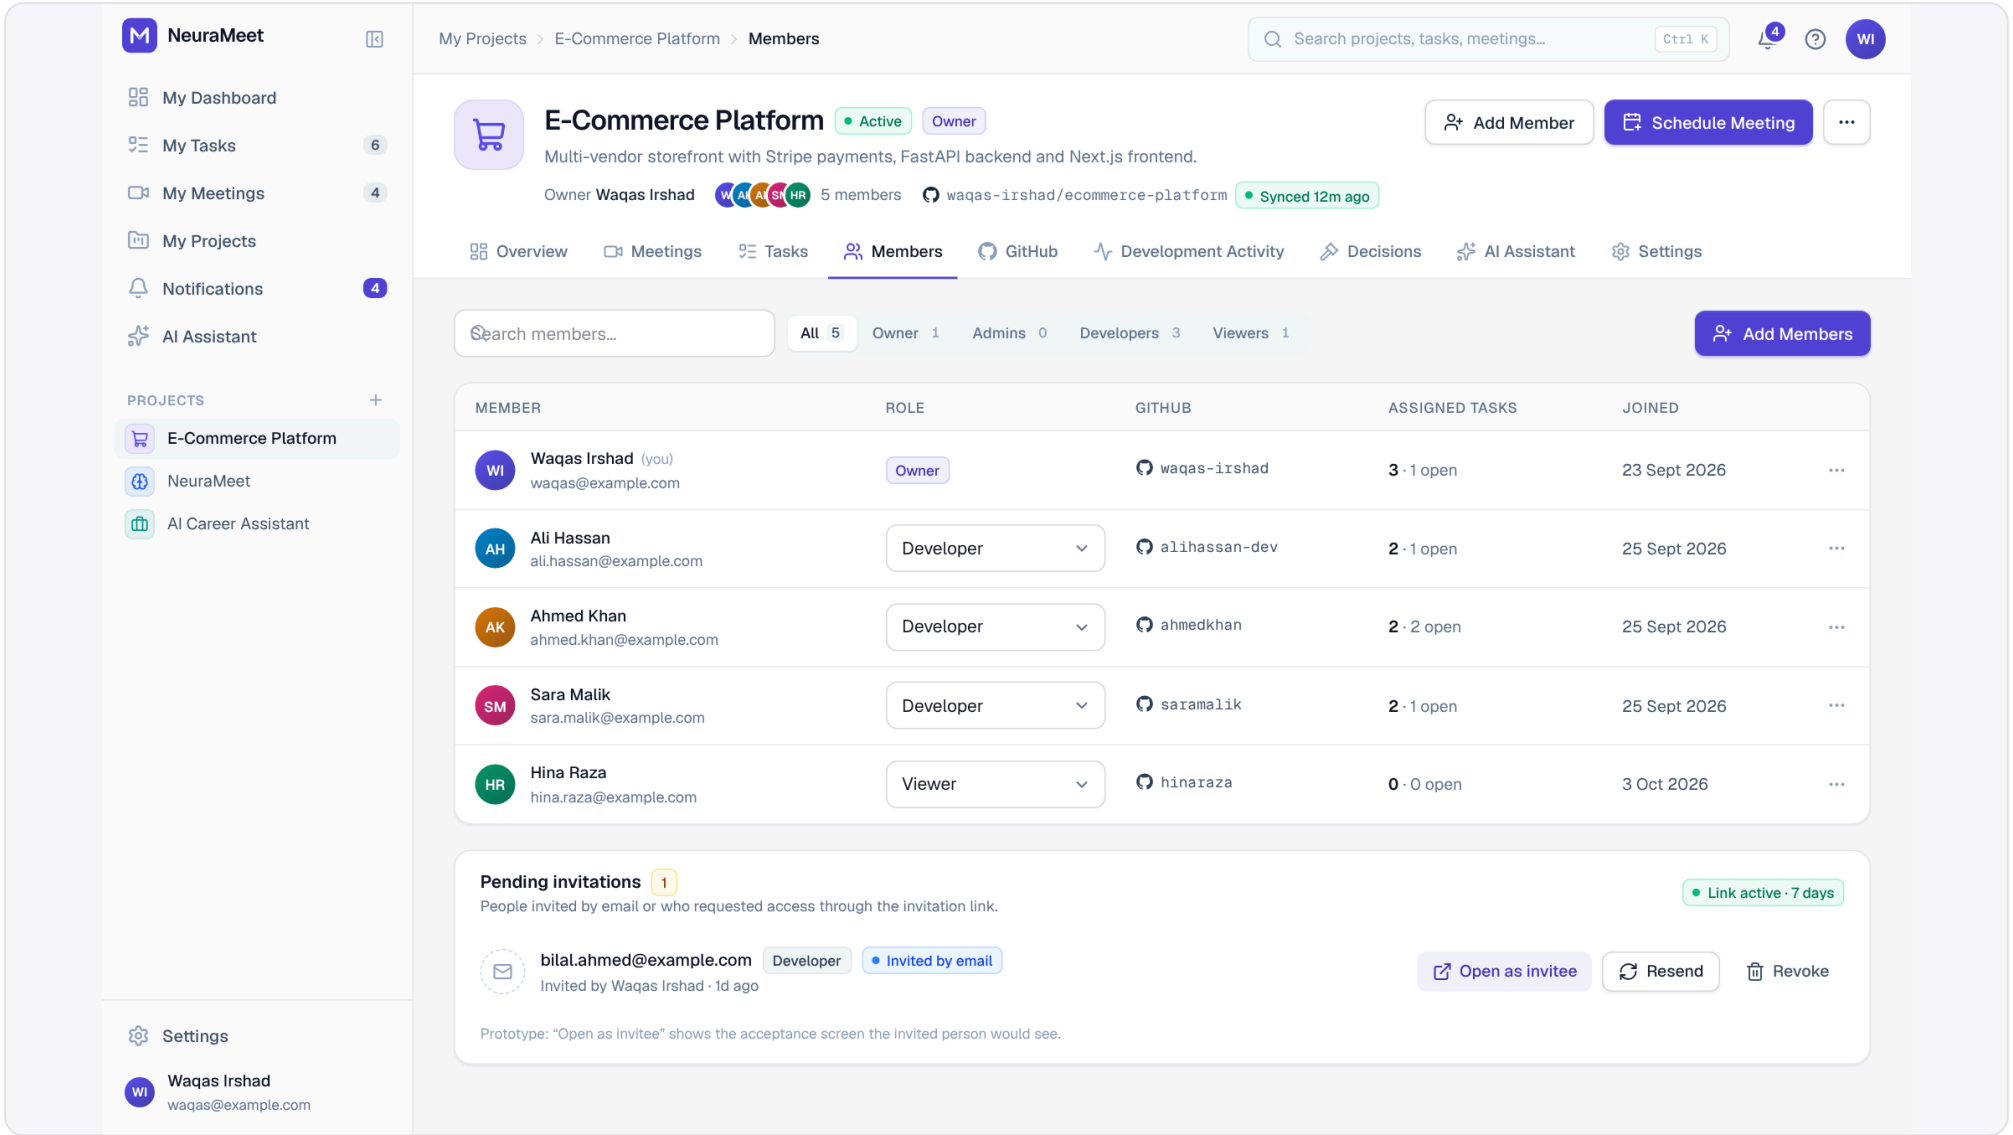

07 Task Details

Editable status, assignee, priority and due date; meeting source; linked GitHub issue, commits and PRs; development simulator (issue → commit → PR → review → merge); completion evidence; comments and activity history.

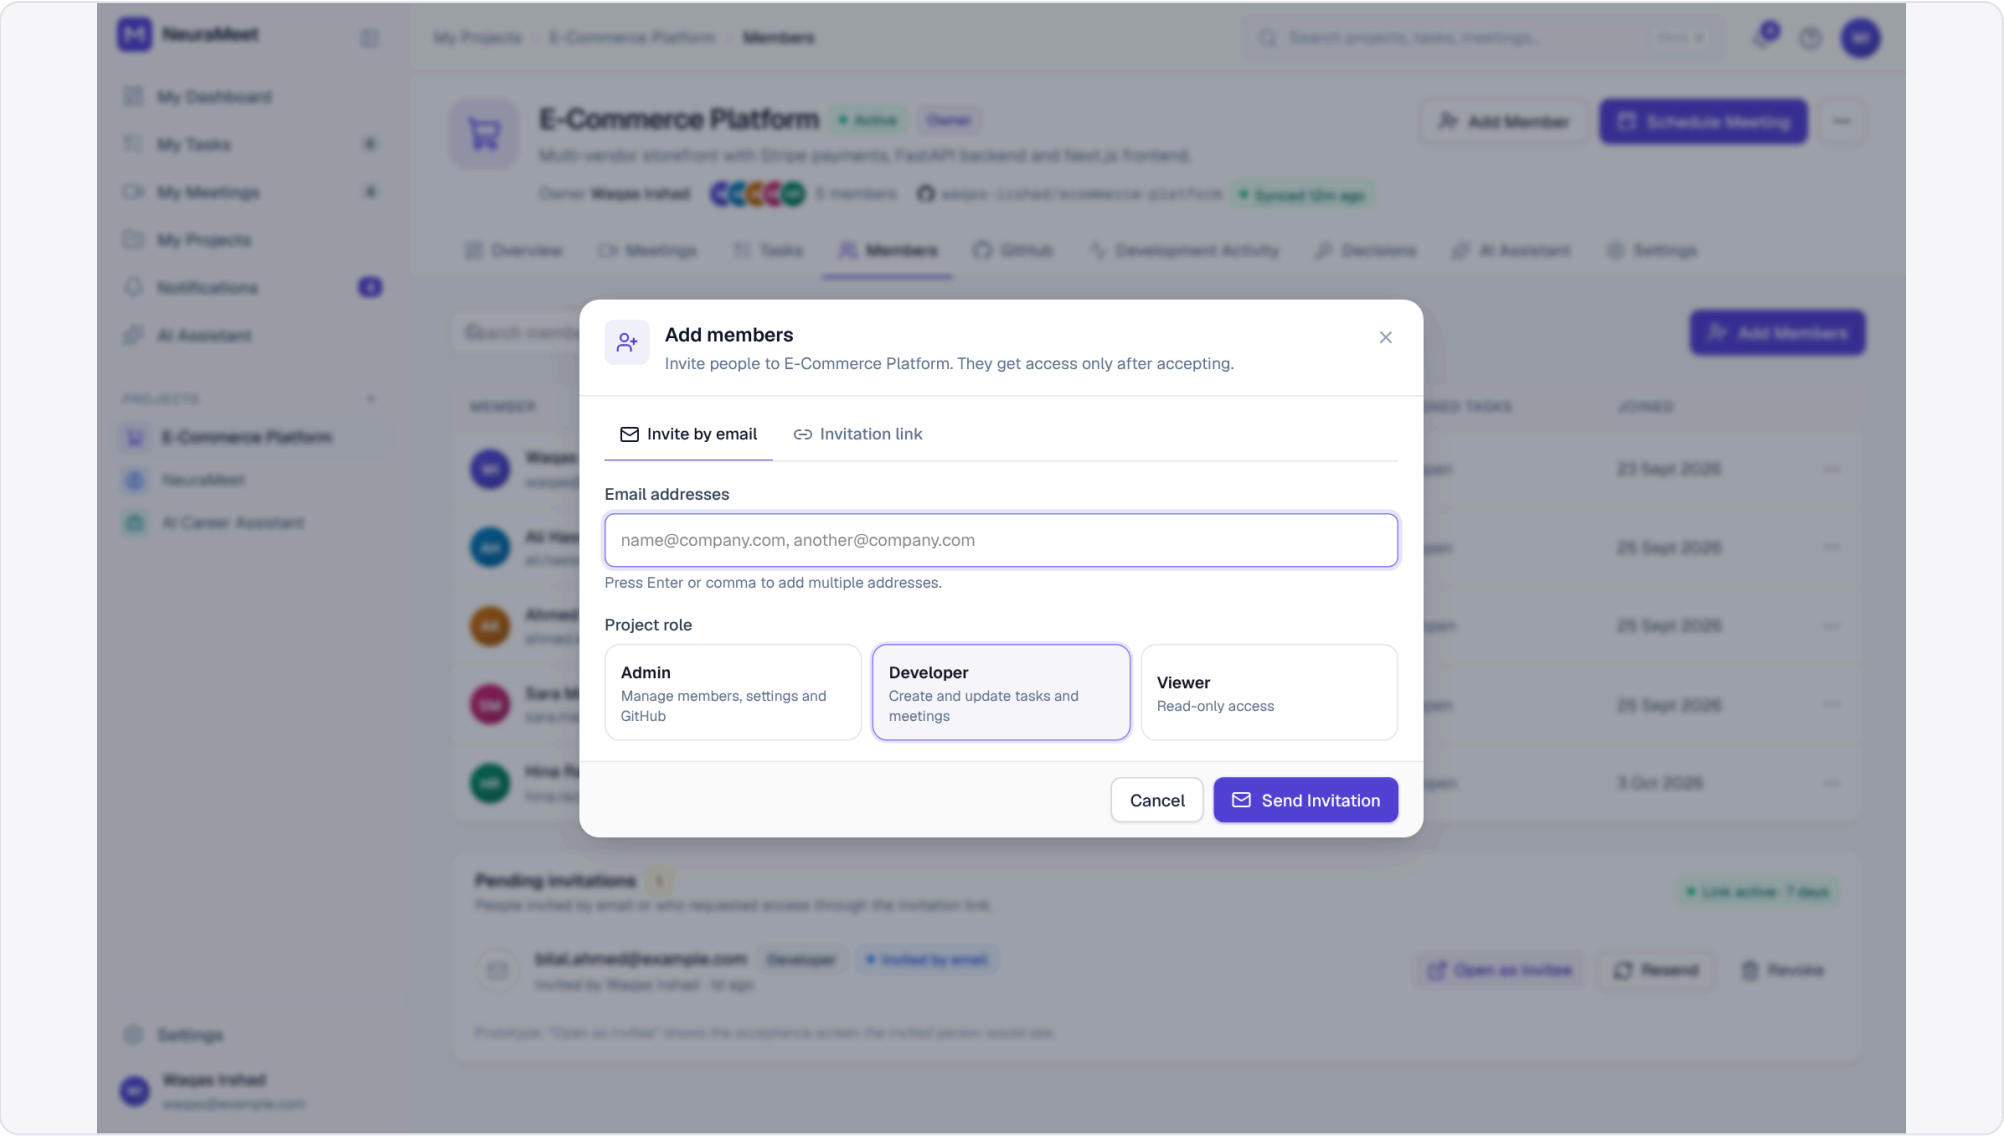

08 Project Members

Owner, Admin, Developer and Viewer roles with email, GitHub username, assigned task count, joined date and actions menu. Pending invitations shown separately with resend, revoke and approve/reject.

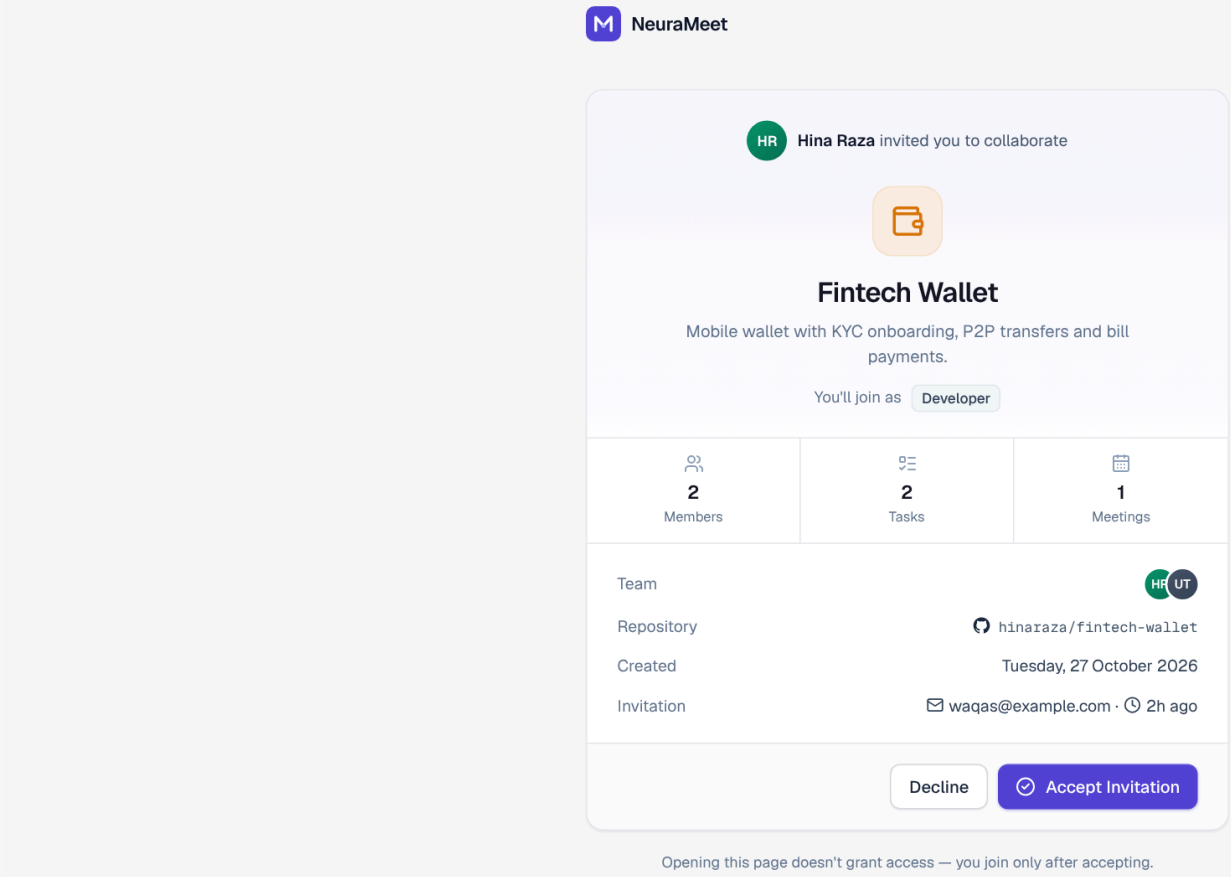

09 Add Members Dialog

Two methods: invite by email (multiple addresses, role) and invitation link (generate, copy, expiry, disable link, require owner approval).

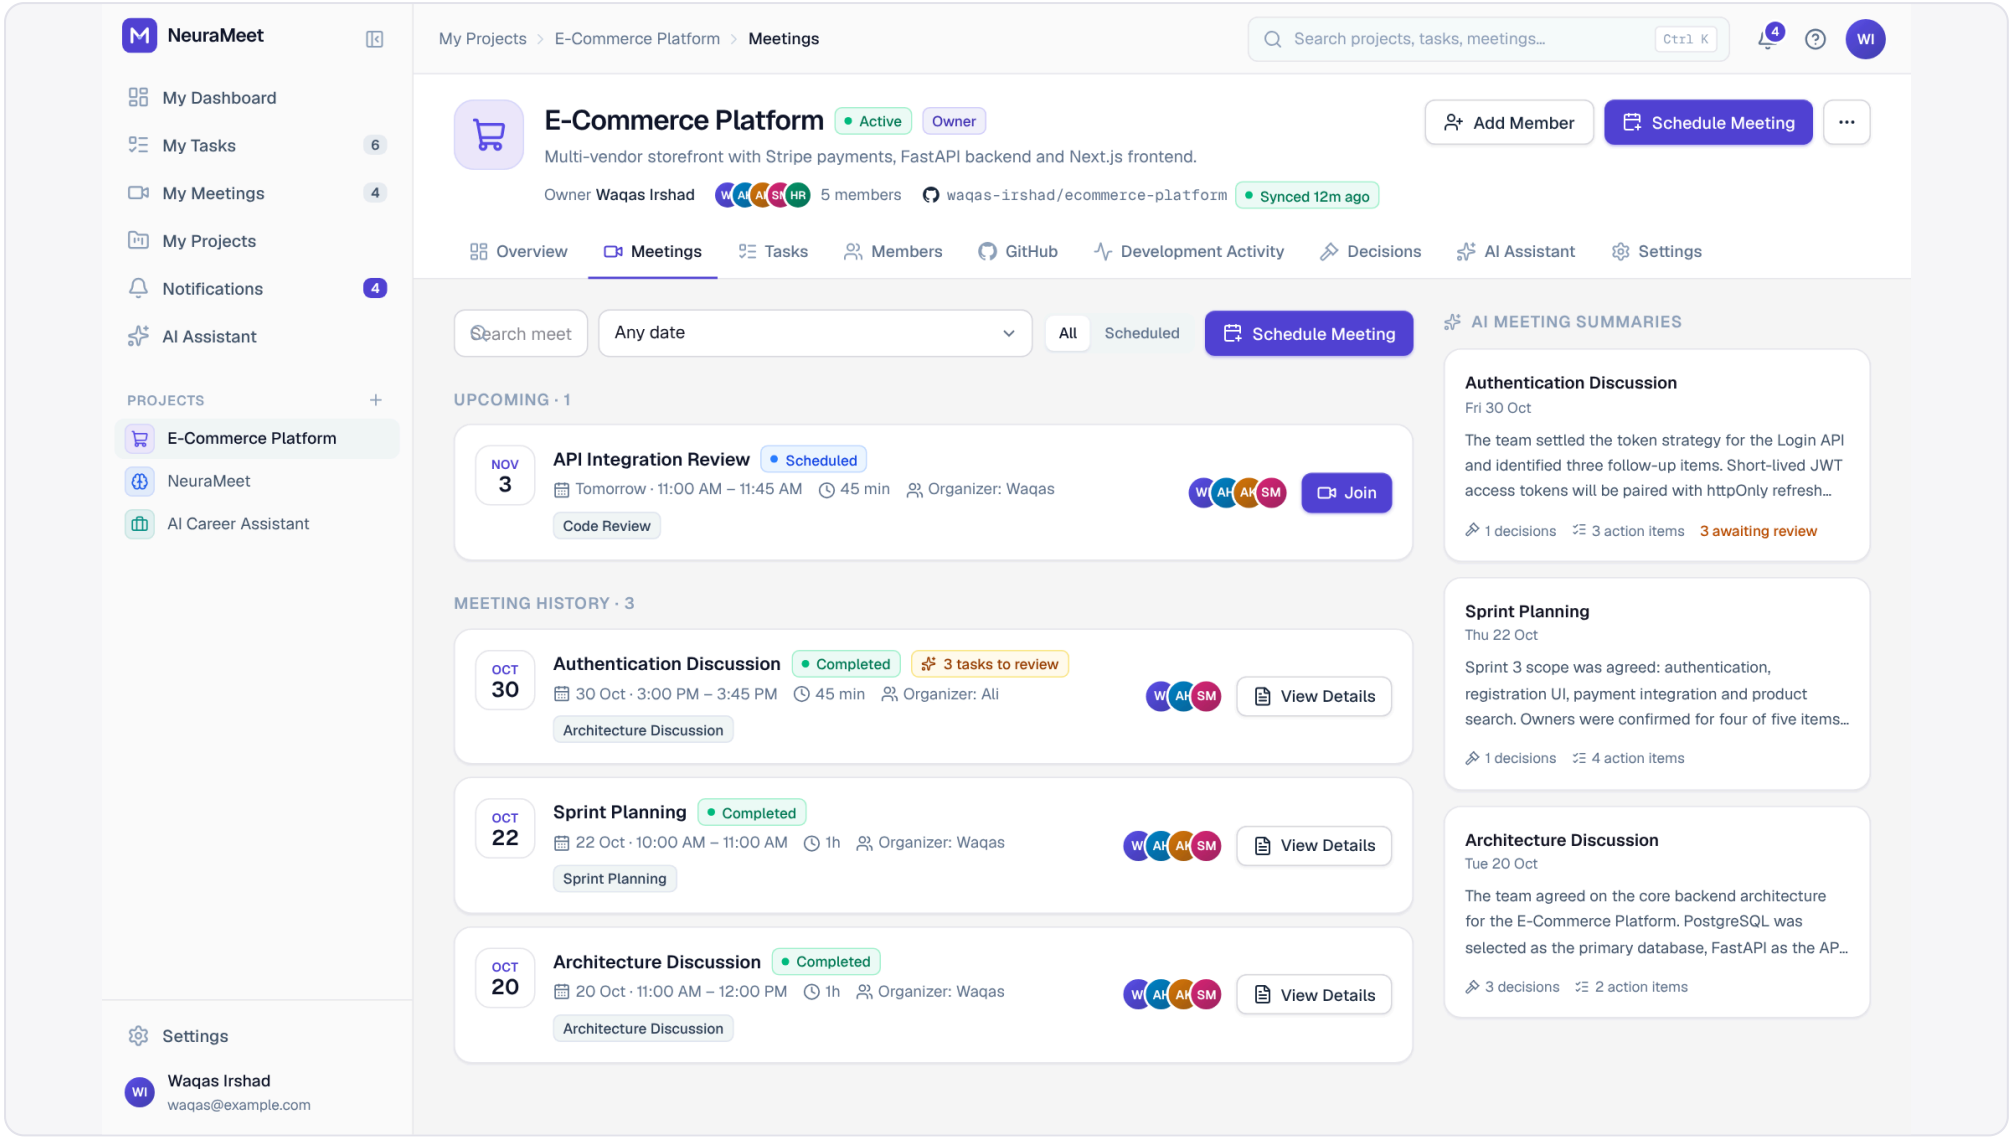

10 Invitation Acceptance

Shows project, inviter, role, team and repository. Access is granted only after Accept (and owner approval for link requests) — opening the link alone grants nothing.

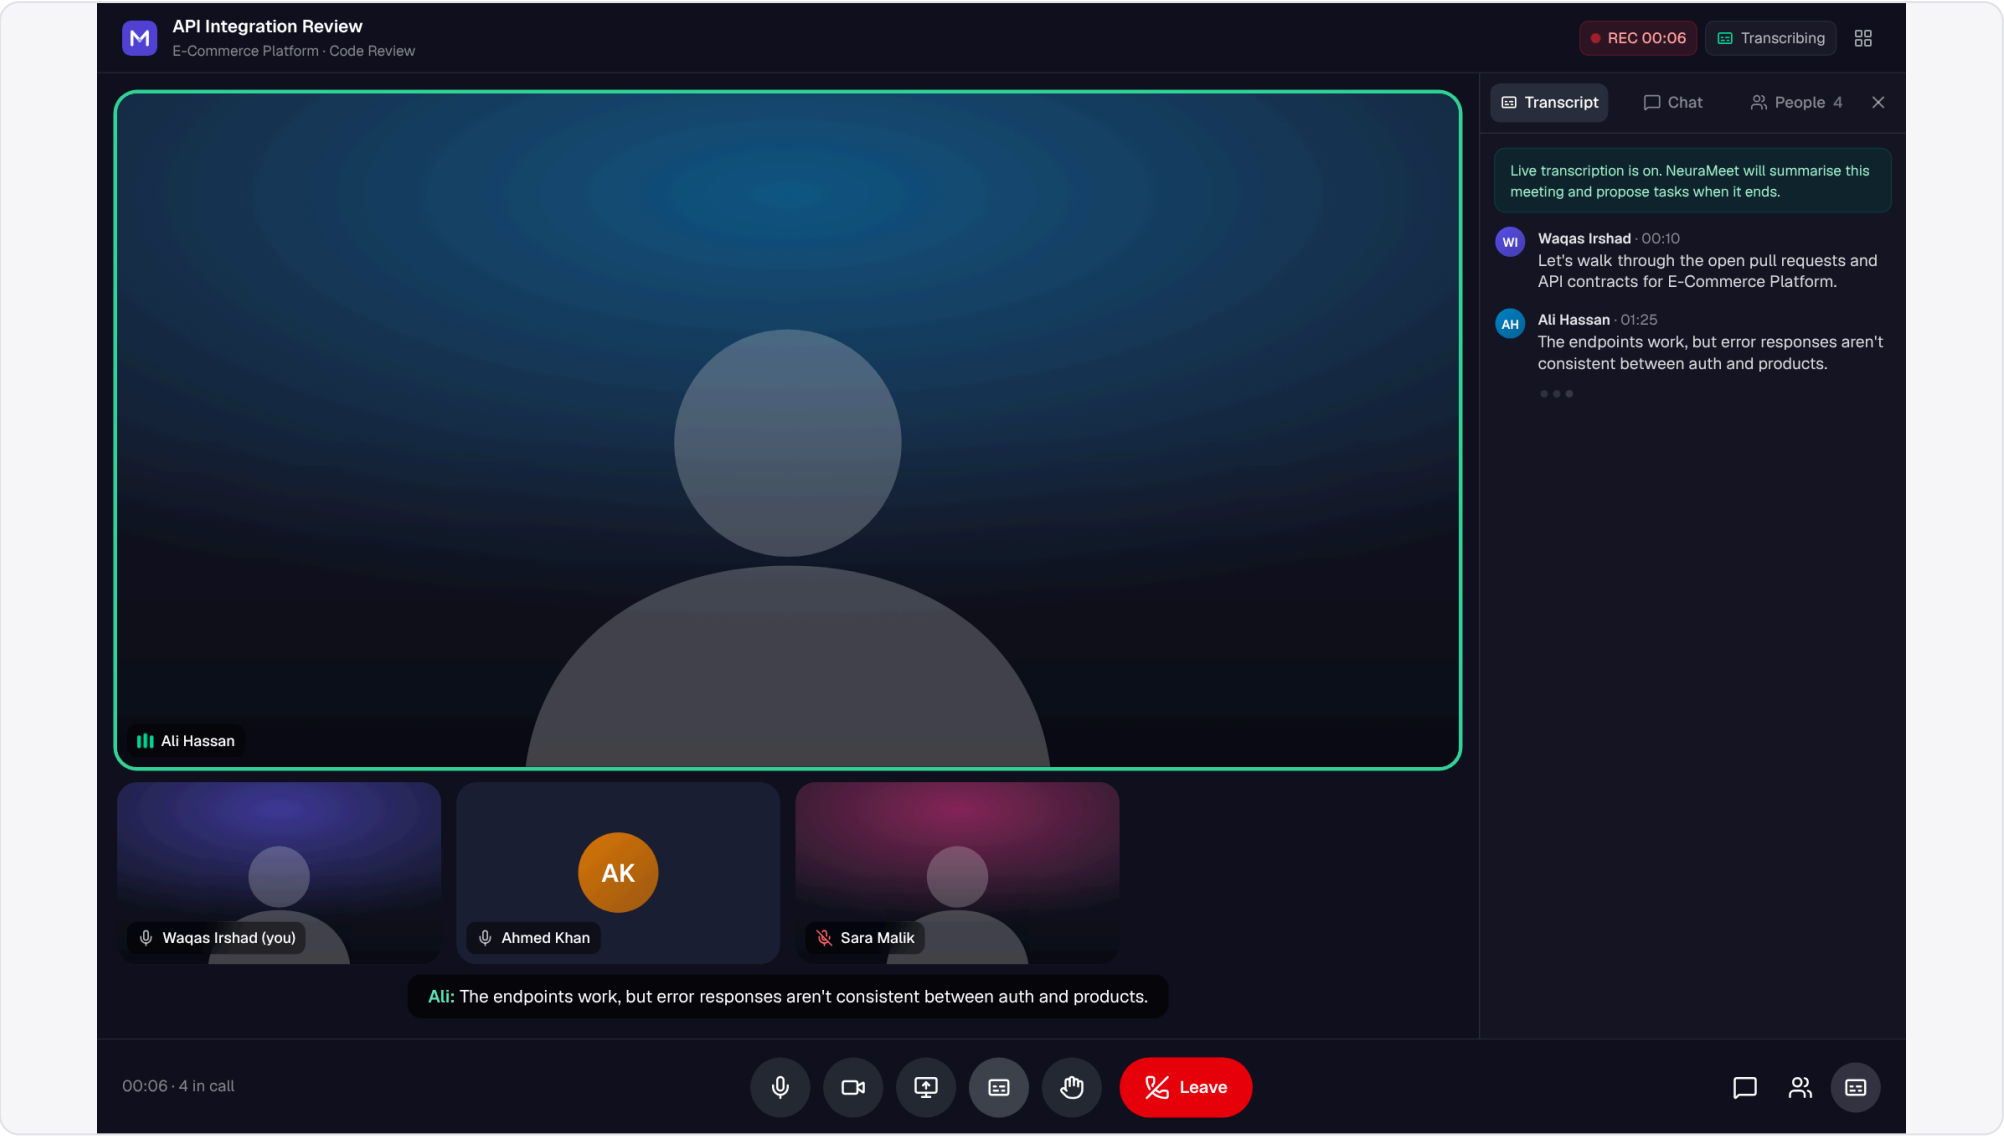

11 Project Meetings

Upcoming meetings, meeting history and AI summaries with search, date and status filters. Schedule Meeting dialog with title, description, date, start/end time, participants and meeting type.

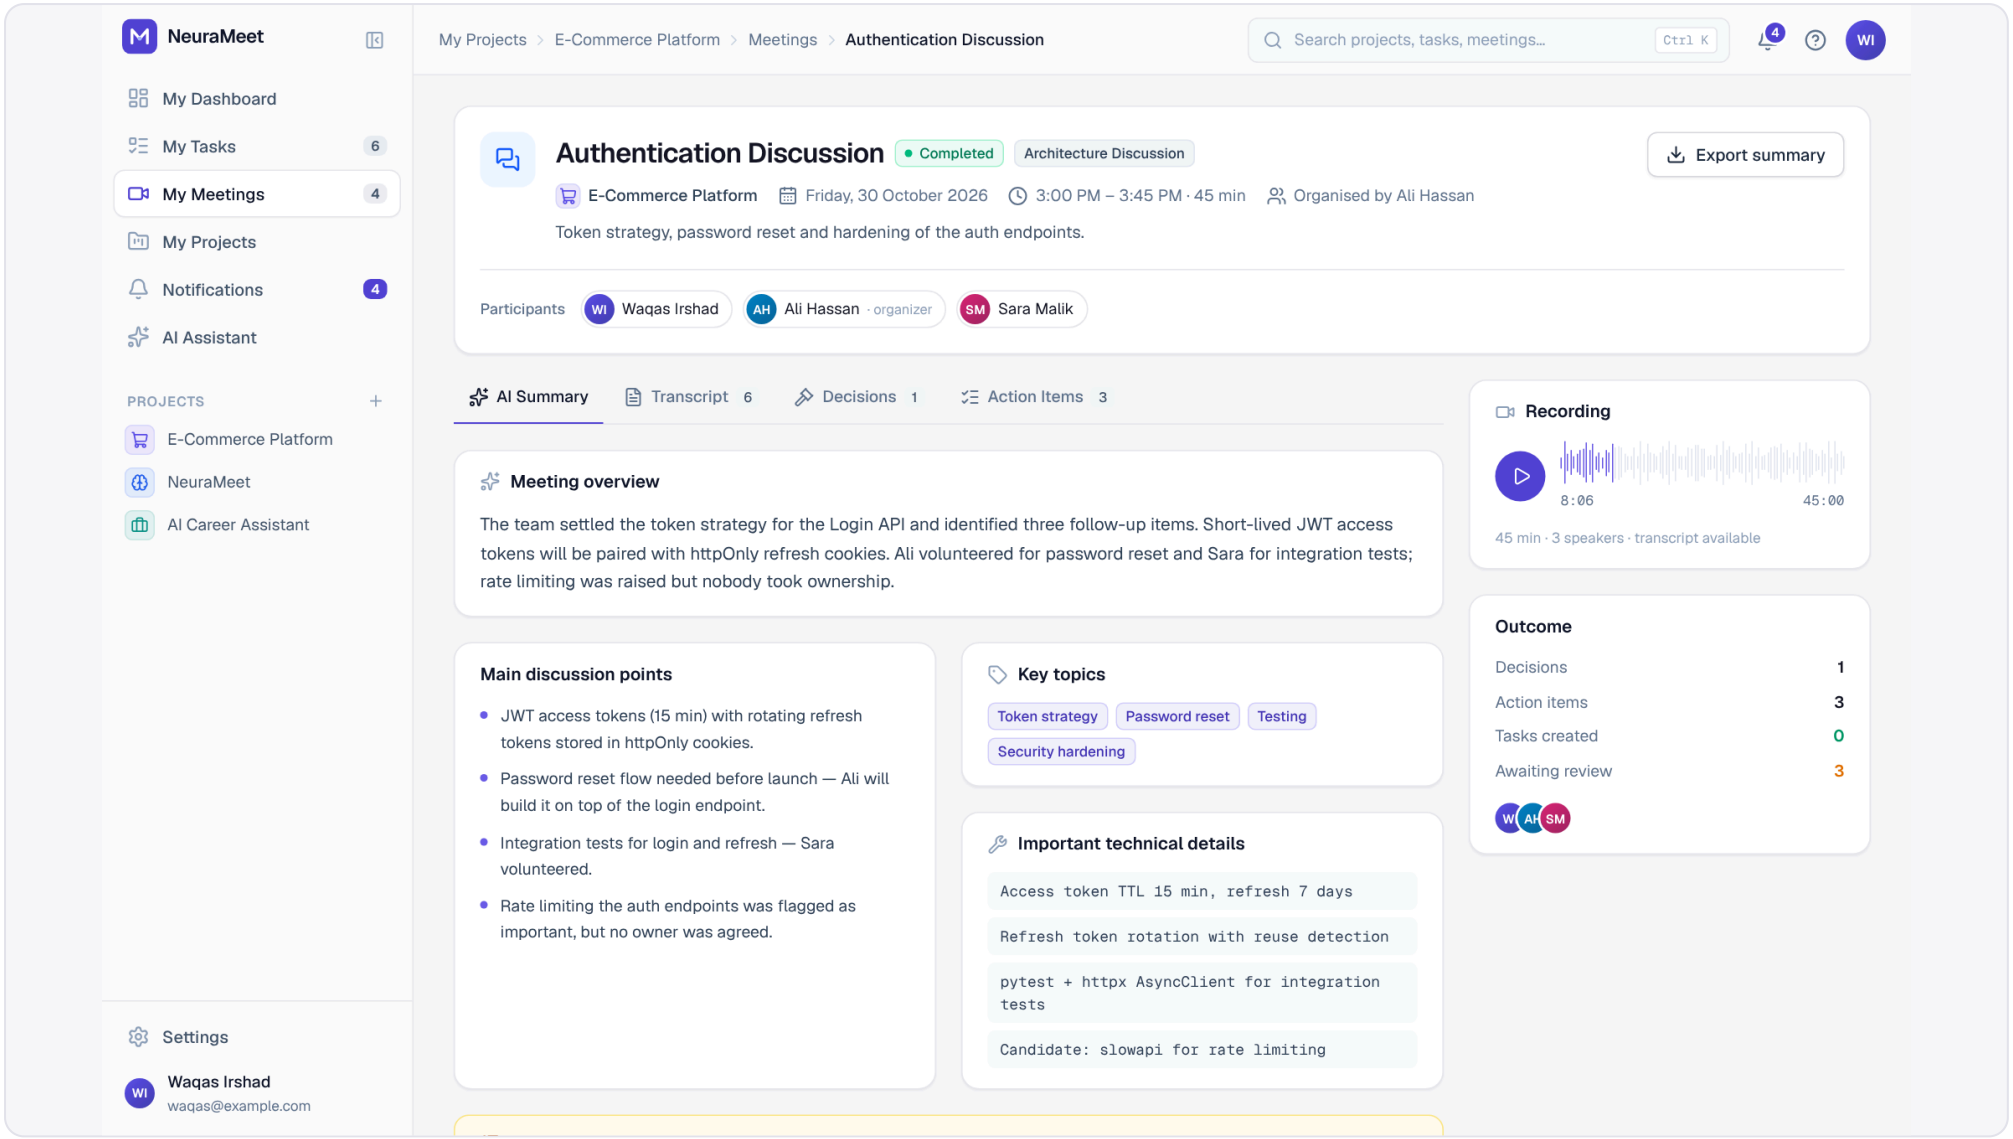

12 Live Meeting

Active speaker and participant tiles, mic, camera, screen share, captions, raise hand, recording indicator with timer, live transcription, chat and participants panels, and Leave / End Meeting.

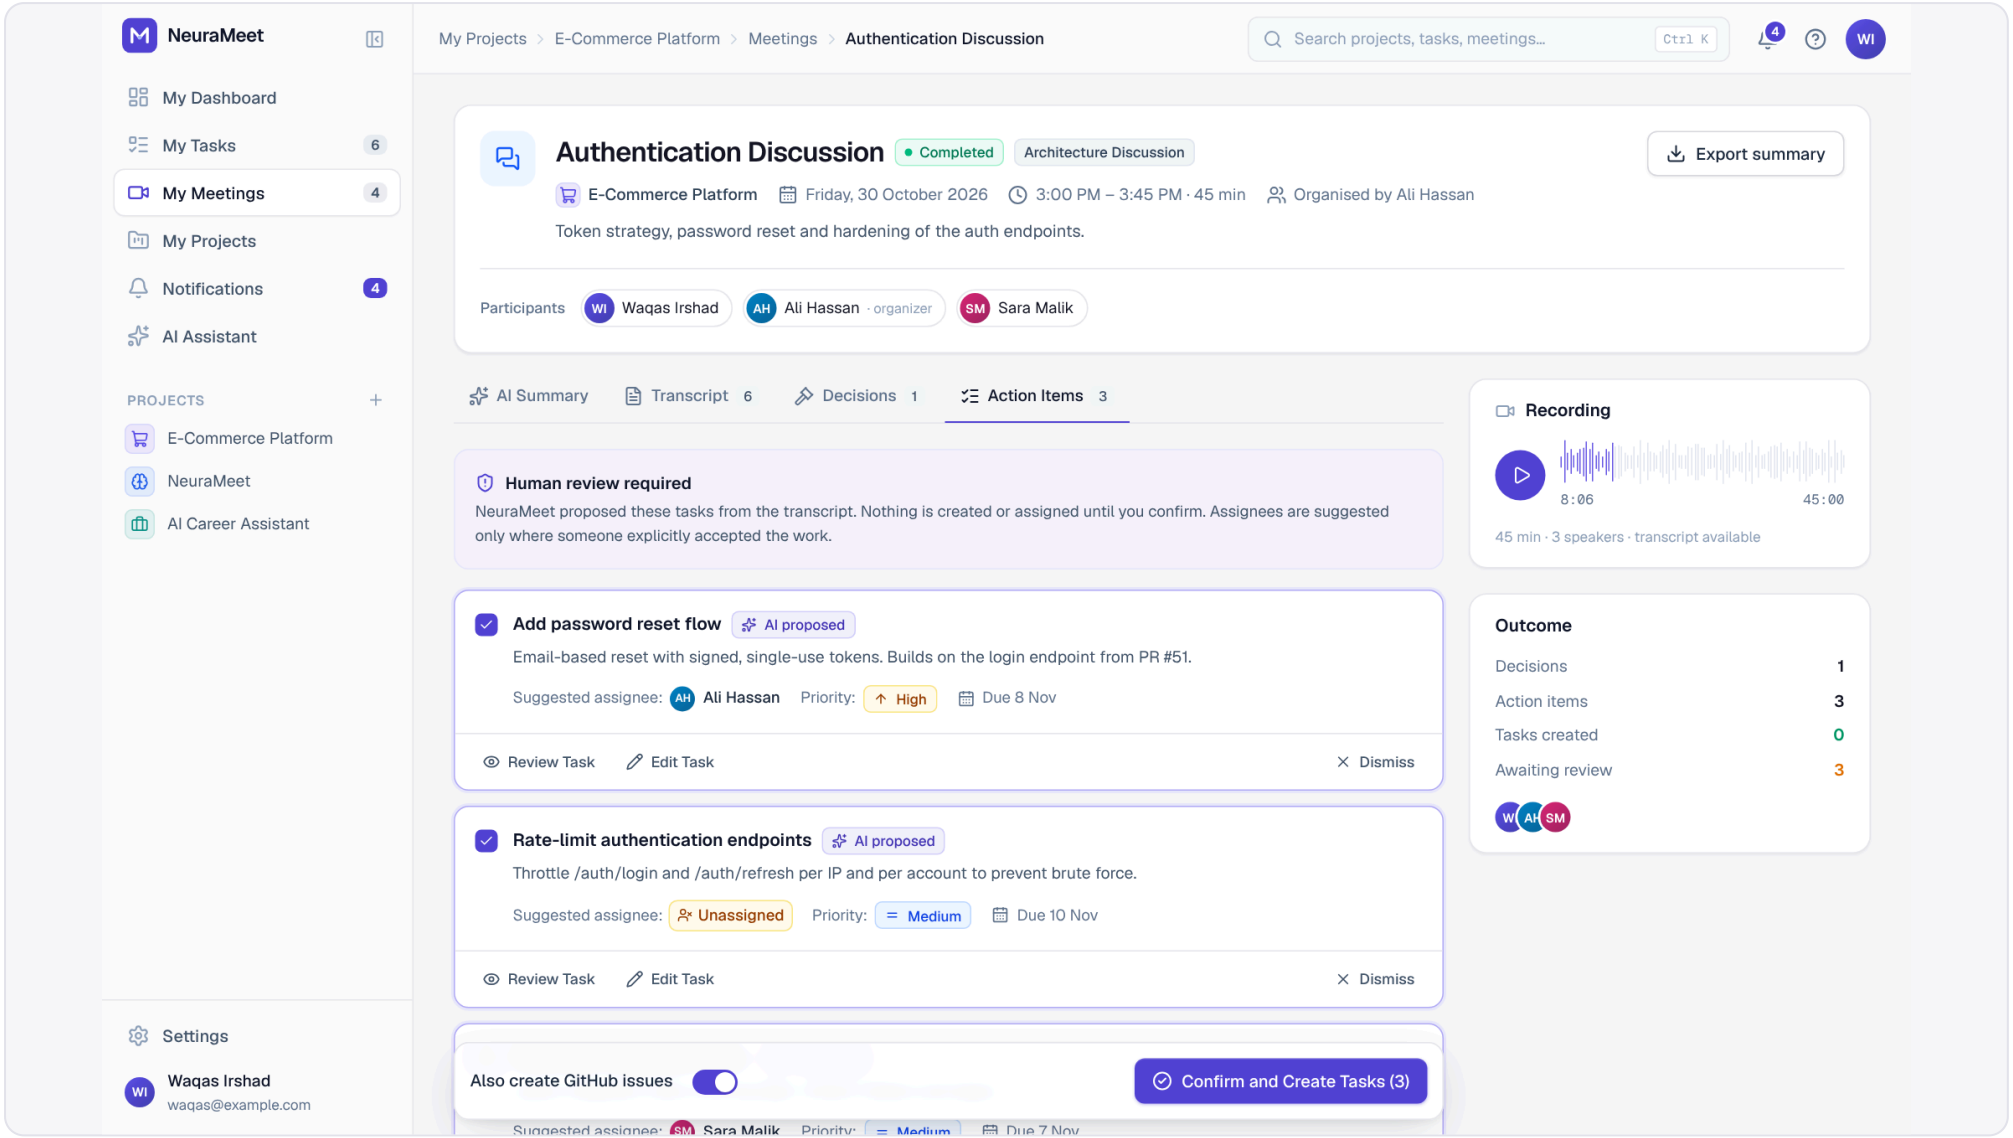

13 Meeting Details · AI Summary

Overview, main discussion points, key topics and technical details, plus recording player. Tabs for Transcript, Decisions and Action Items.

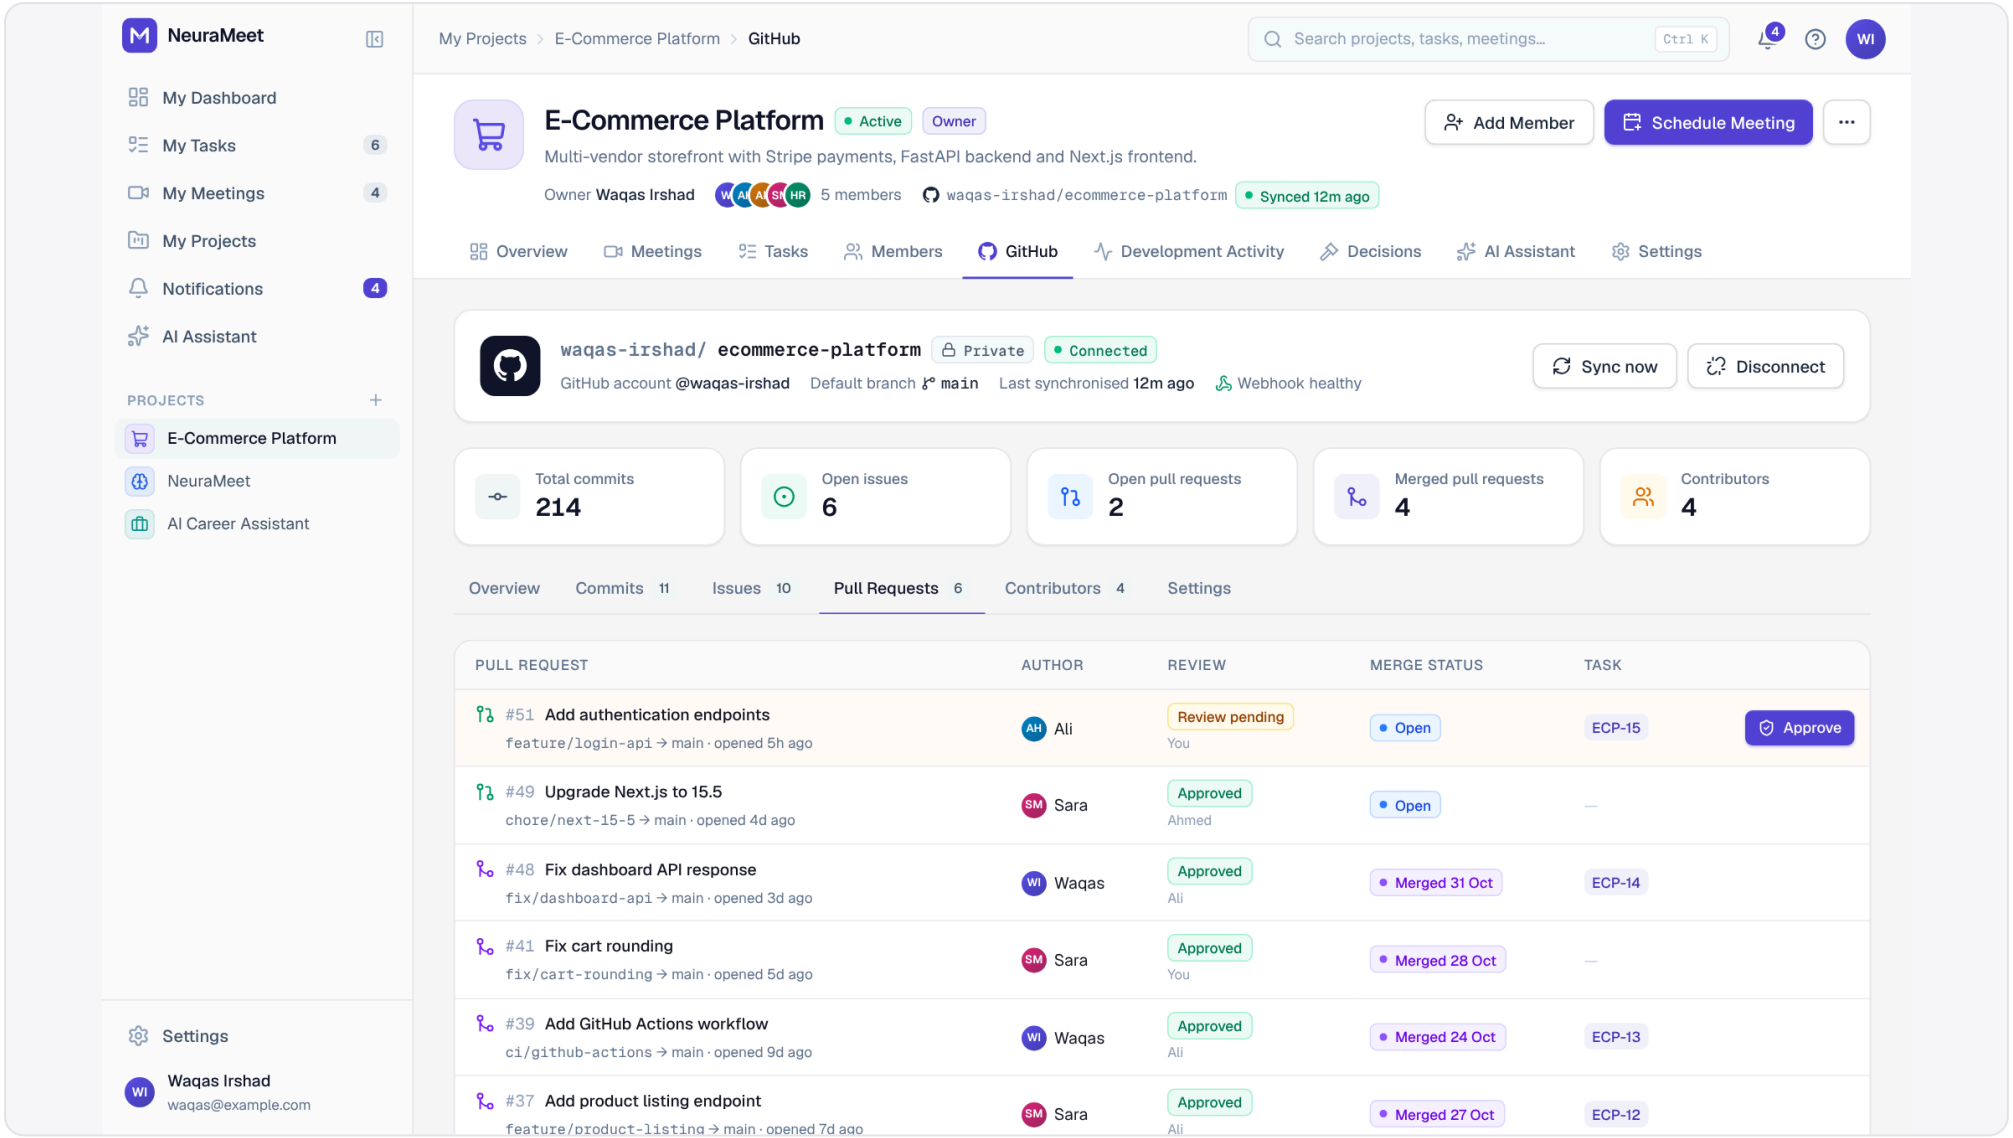

14 Meeting Details · Action Items

AI-proposed tasks with evidence. Assignees are suggested only when someone clearly accepted the work, otherwise Unassigned. Review, Edit, Dismiss and Confirm and Create Tasks — nothing is created without human review.

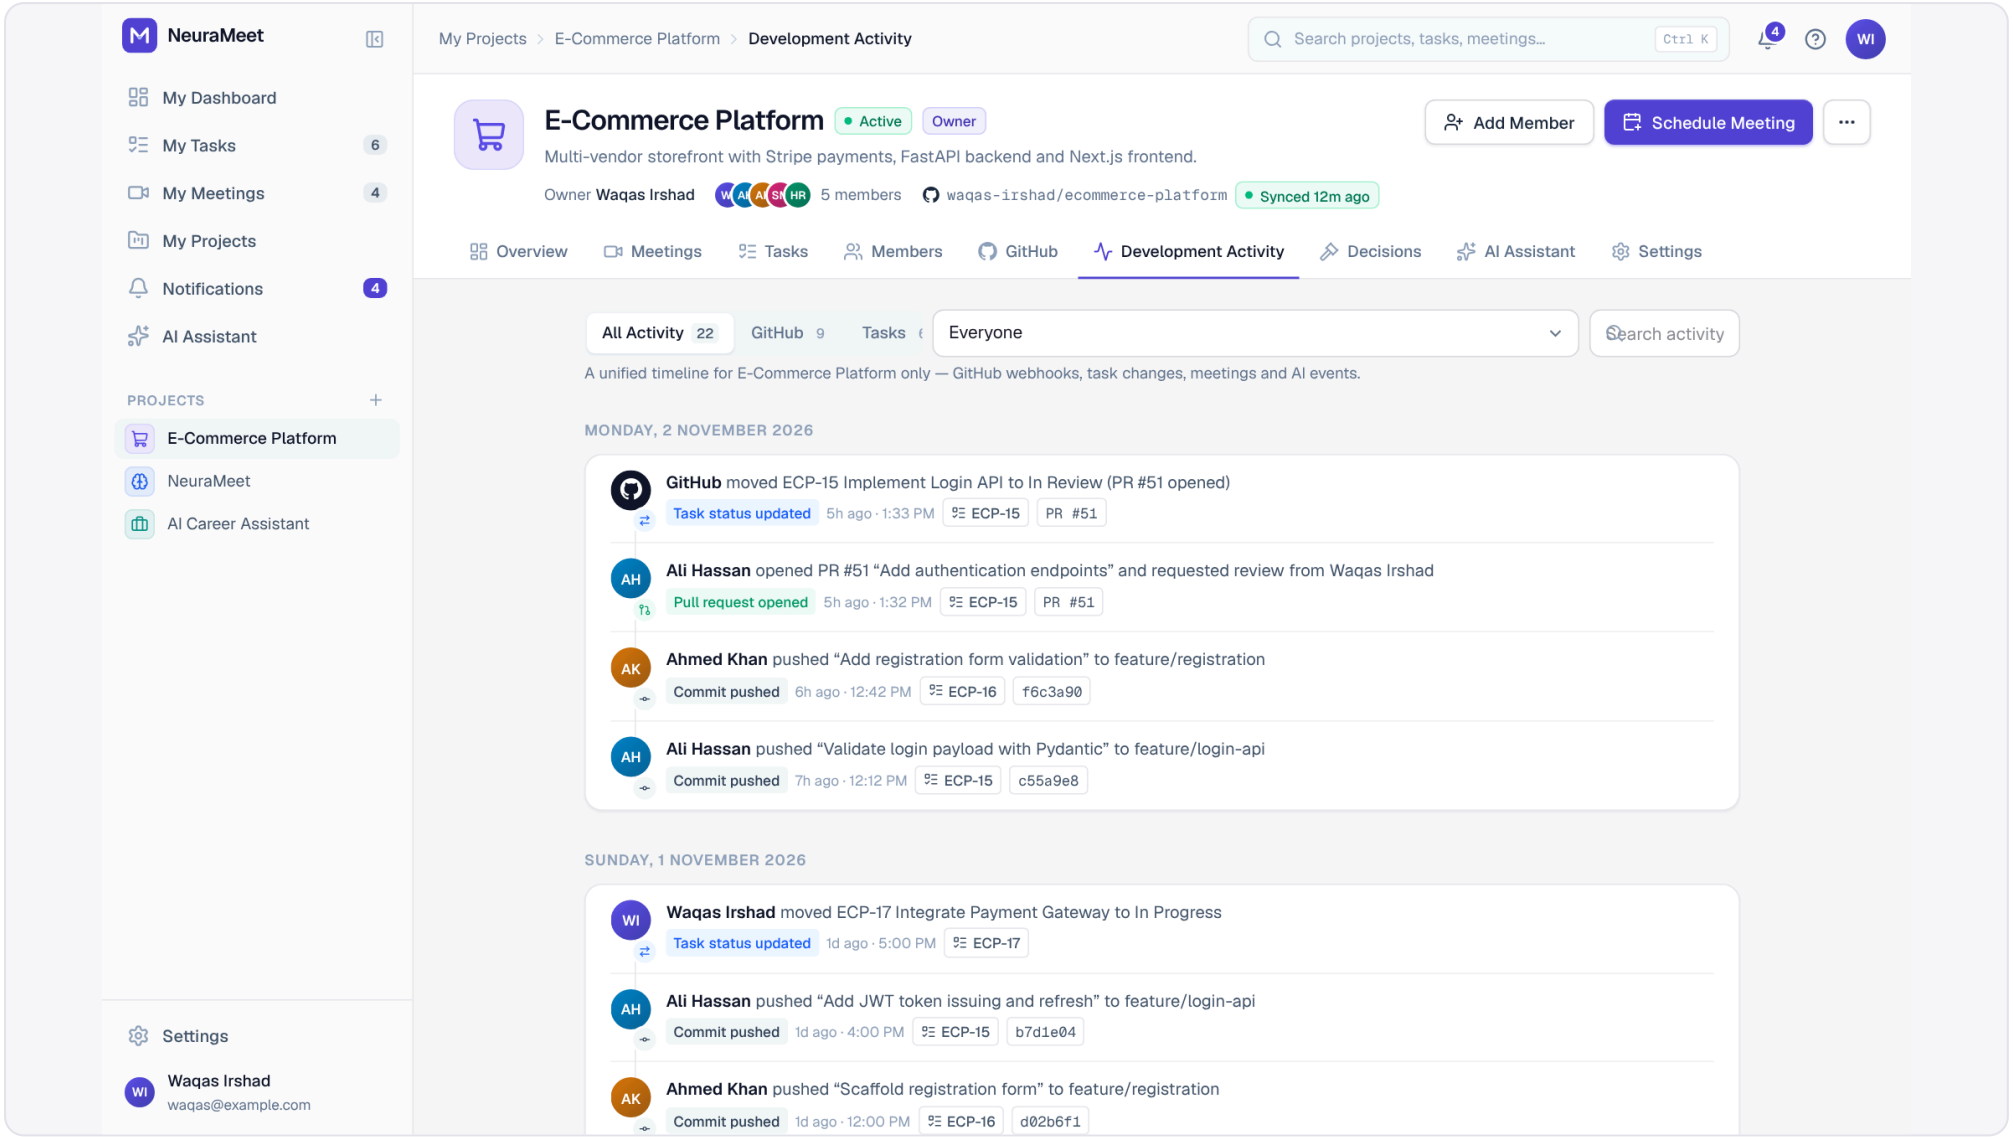

15 GitHub Integration

Repository overview with sync and disconnect, statistics, and tabs for Overview, Commits, Issues, Pull Requests, Contributors and Settings (automation rules and webhook events).

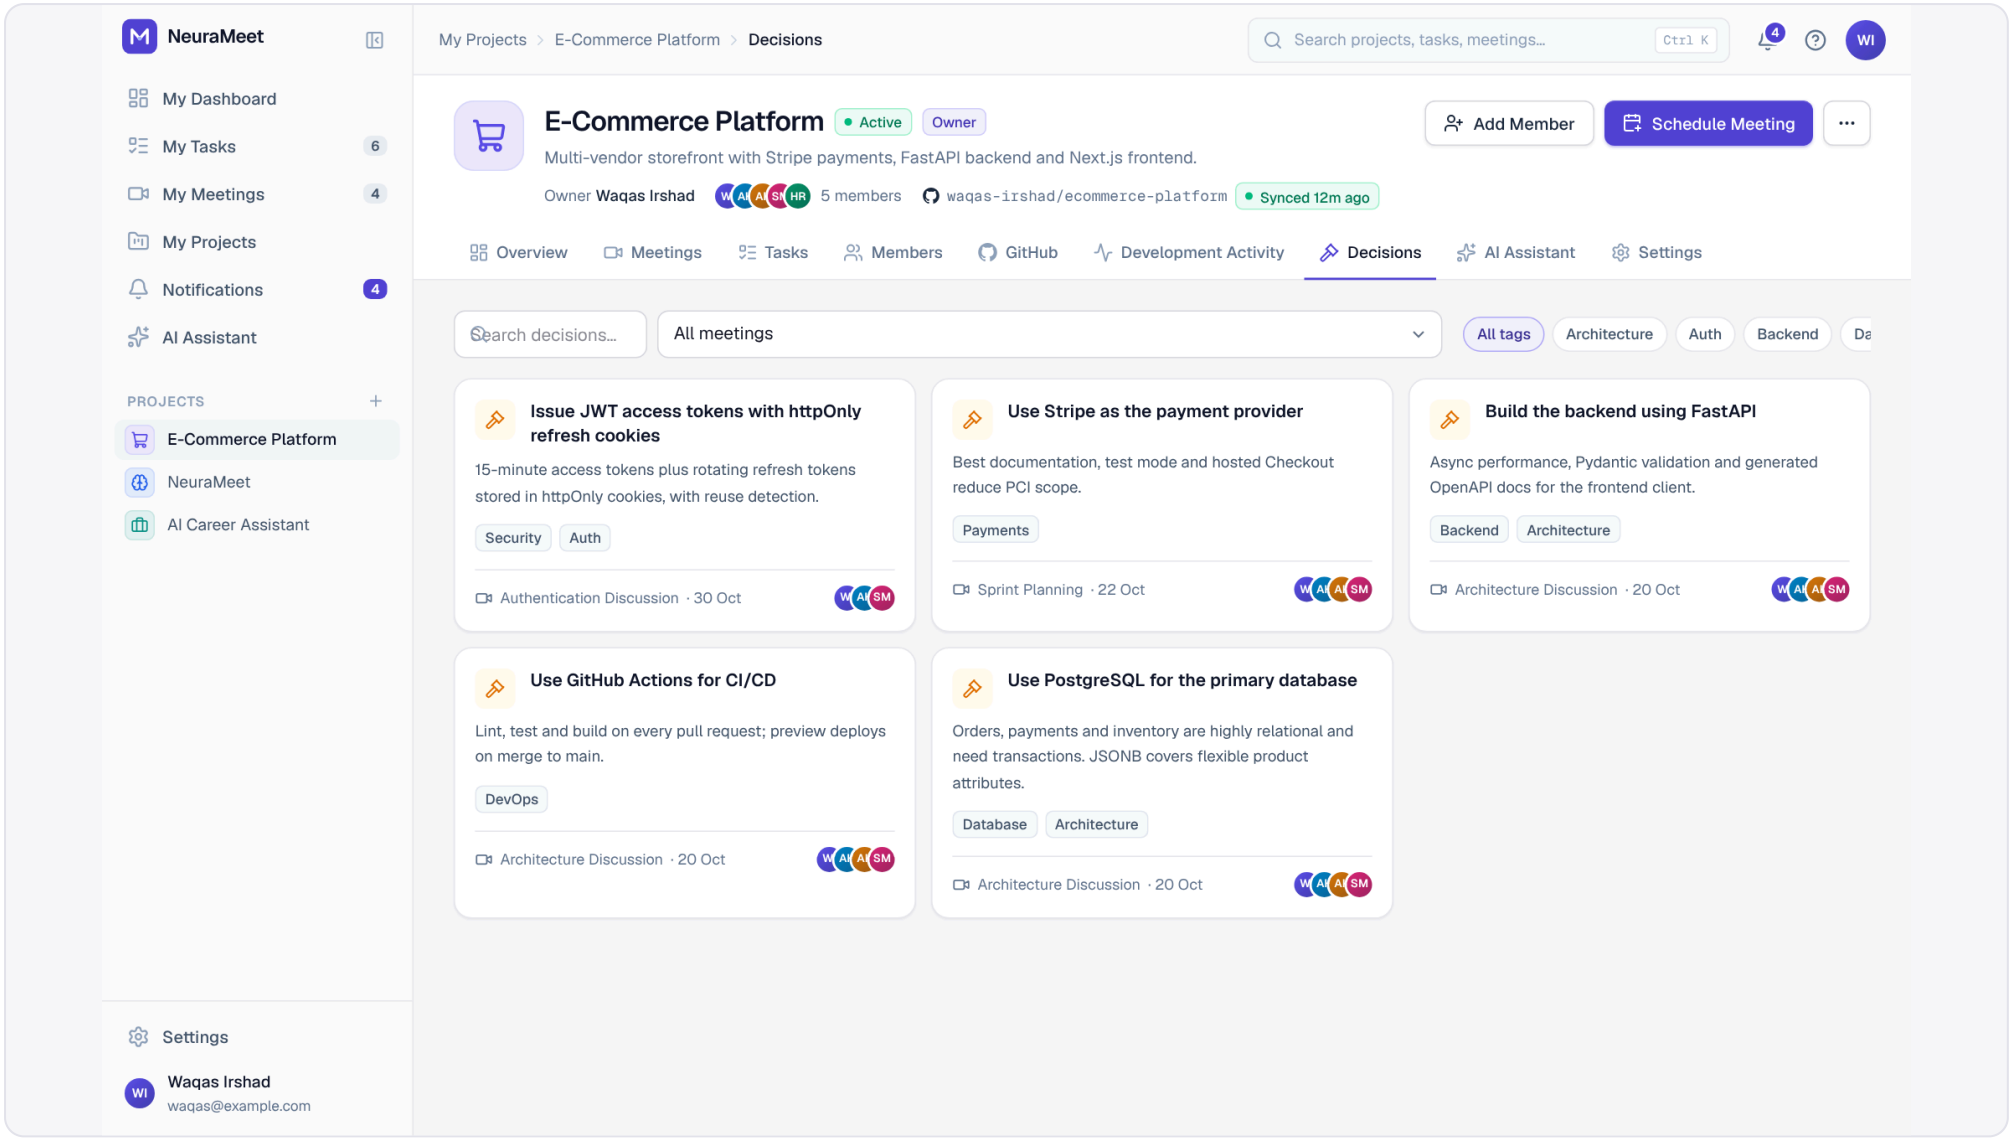

16 Development Activity

Project-only unified timeline of commits, PRs, issues, task changes, meetings, AI summaries and decisions, with filters for GitHub, Tasks, Meetings and Members.

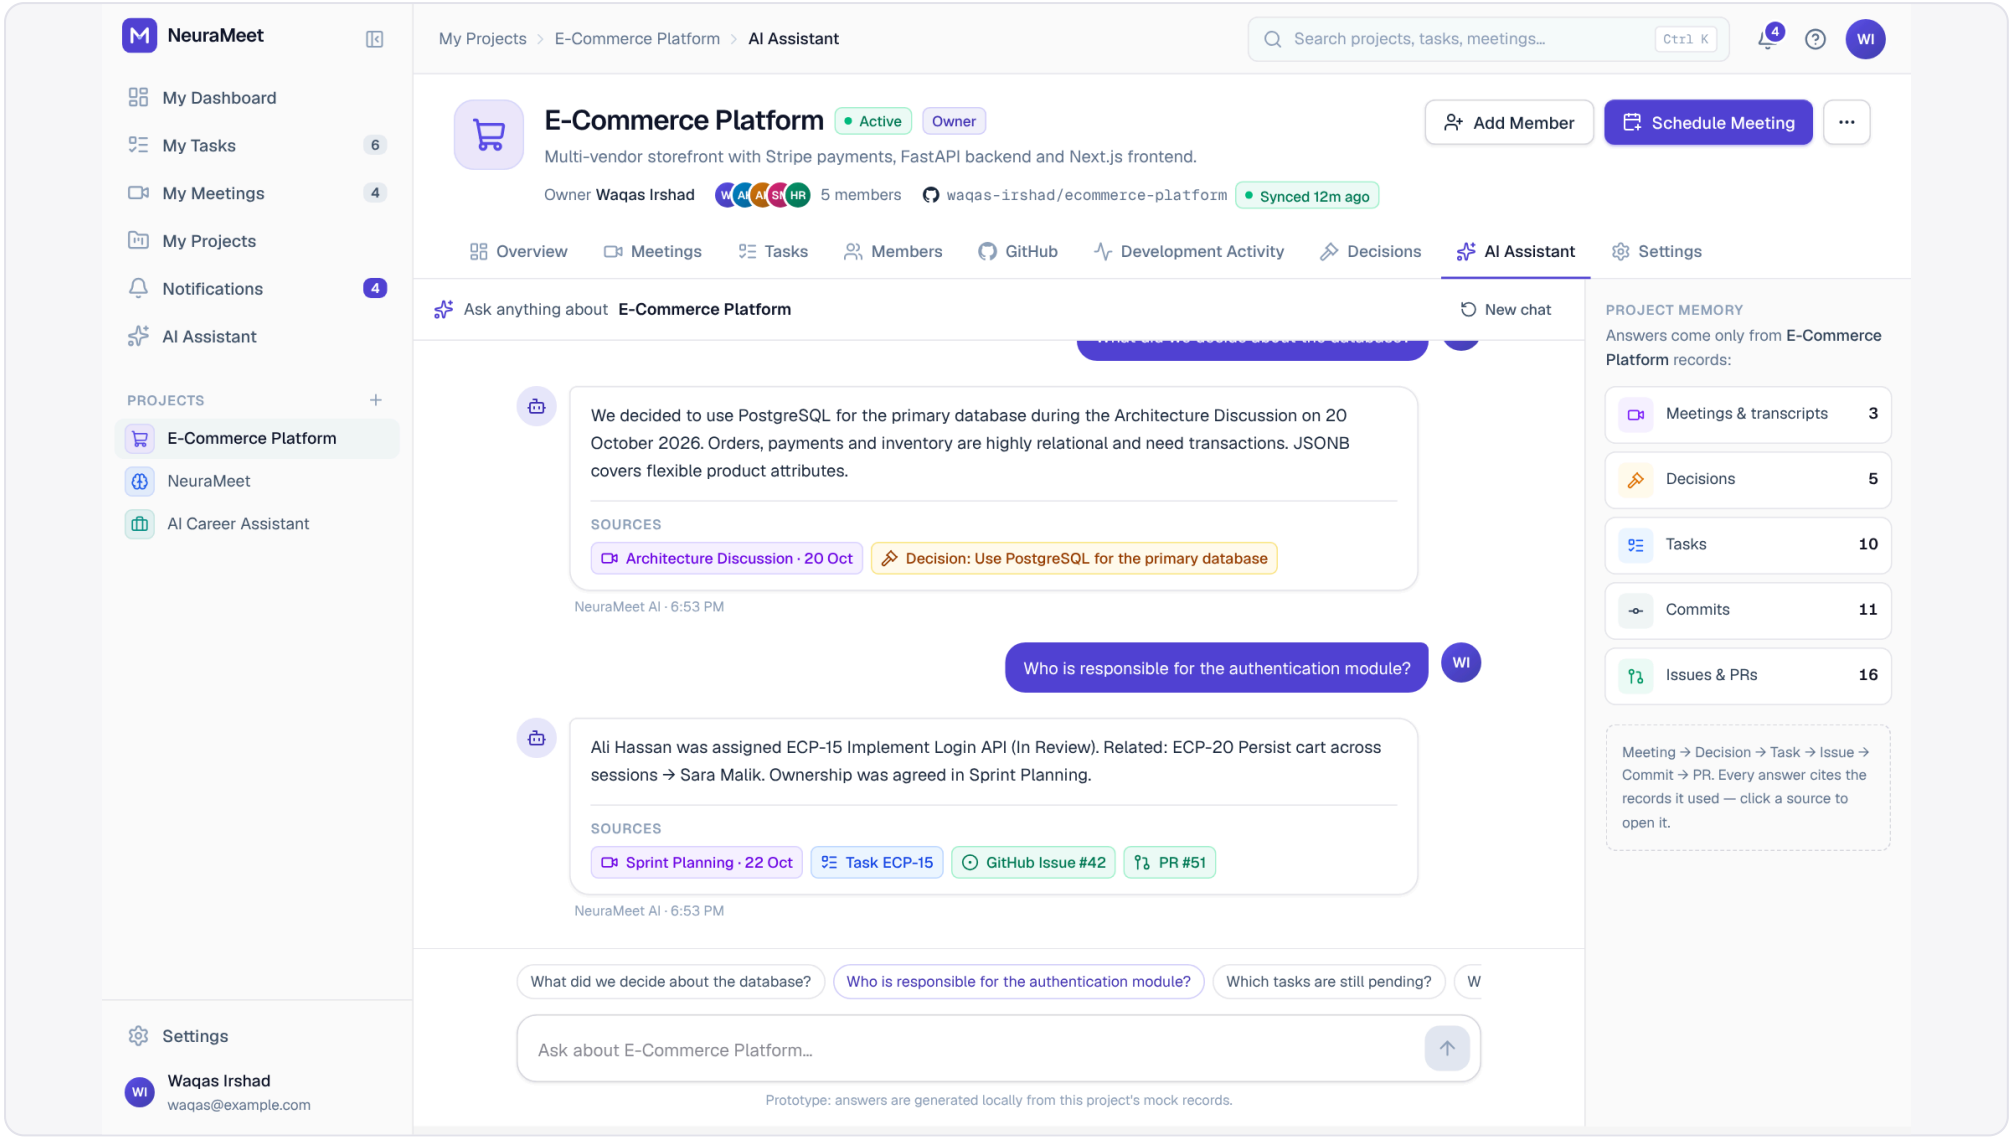

17 Decisions

Technical decisions extracted from meetings with tags, source meeting, date and participants. Clicking opens the original meeting context and transcript.

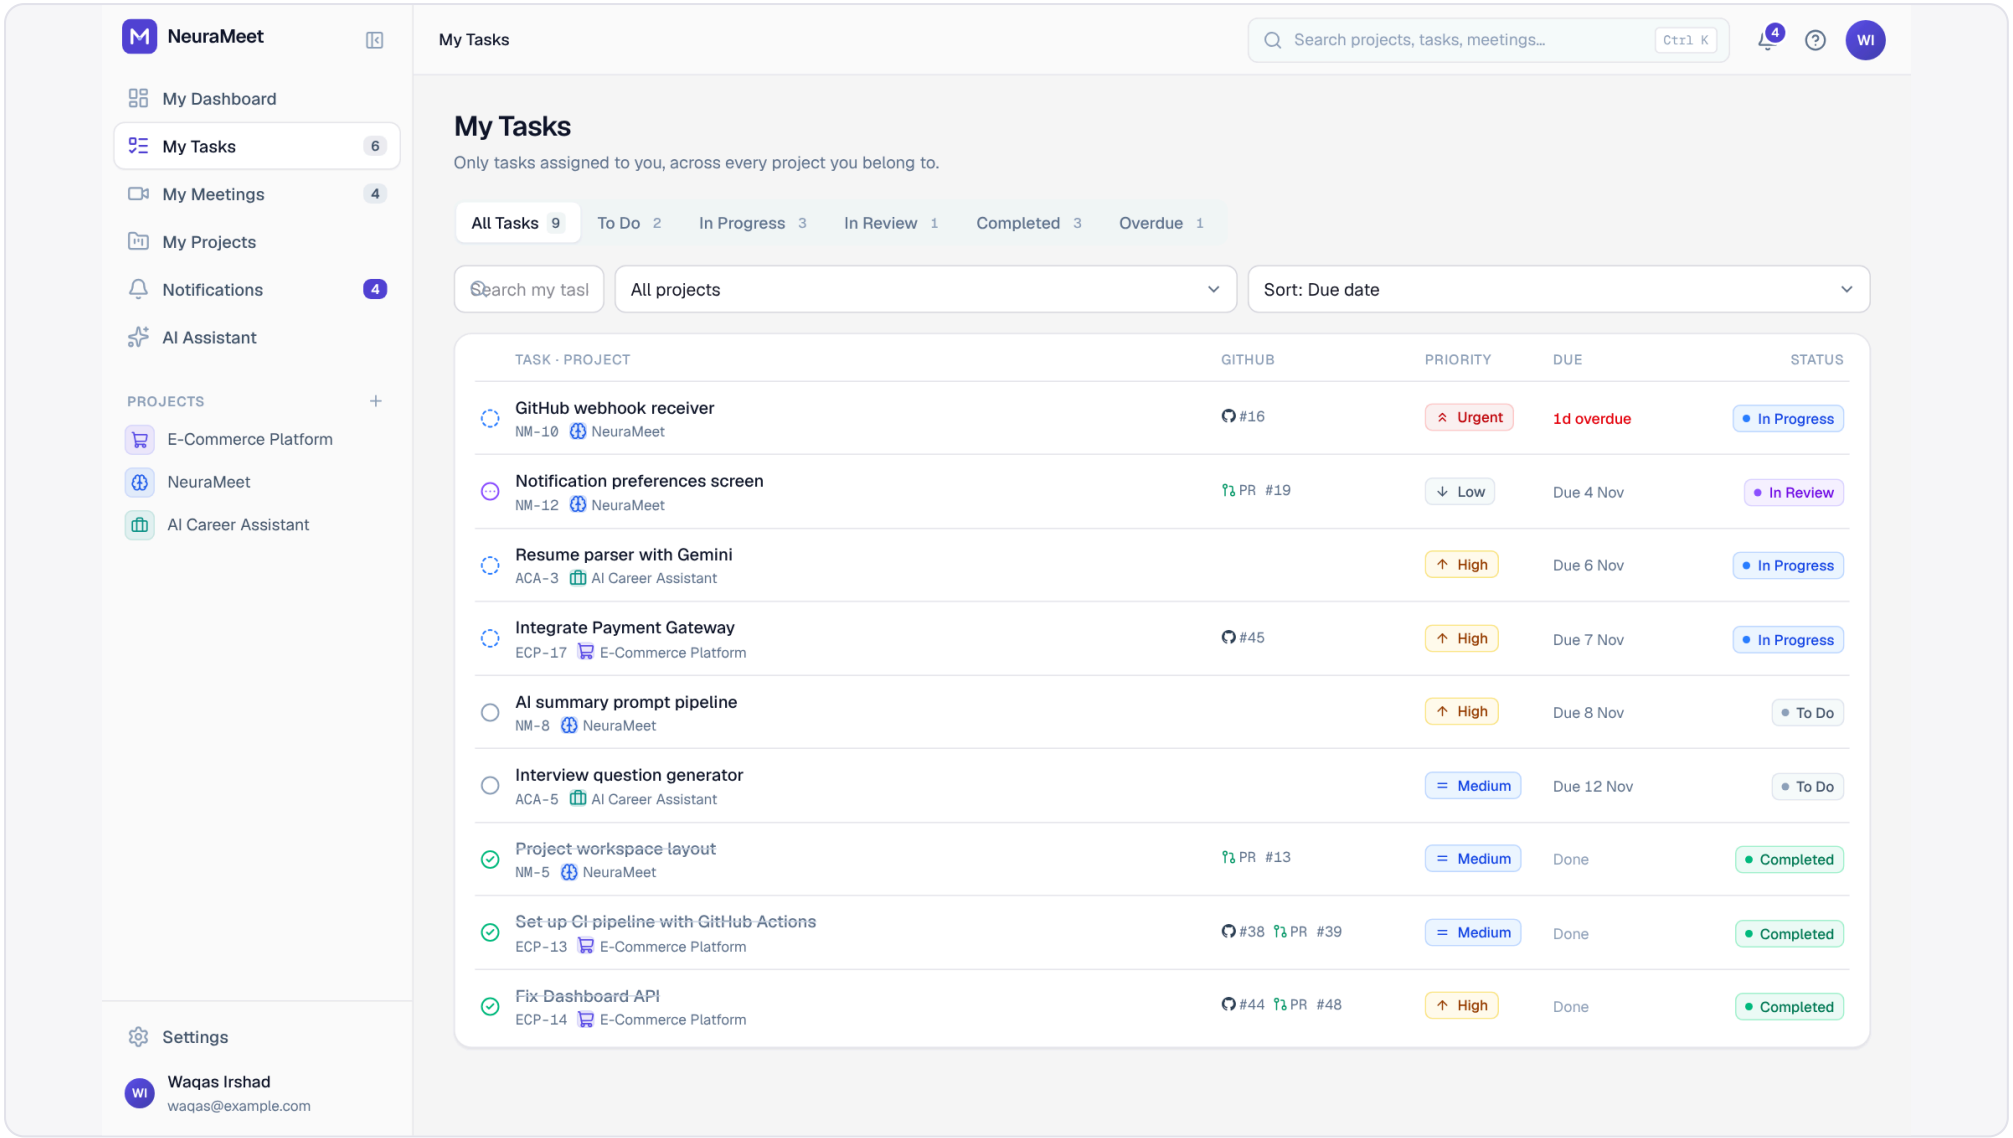

18 AI Project Assistant

Project-scoped chat with suggested questions. Every answer cites its sources (meeting, decision, task, issue, PR) which open the original record. Project memory panel shows what the AI draws from.

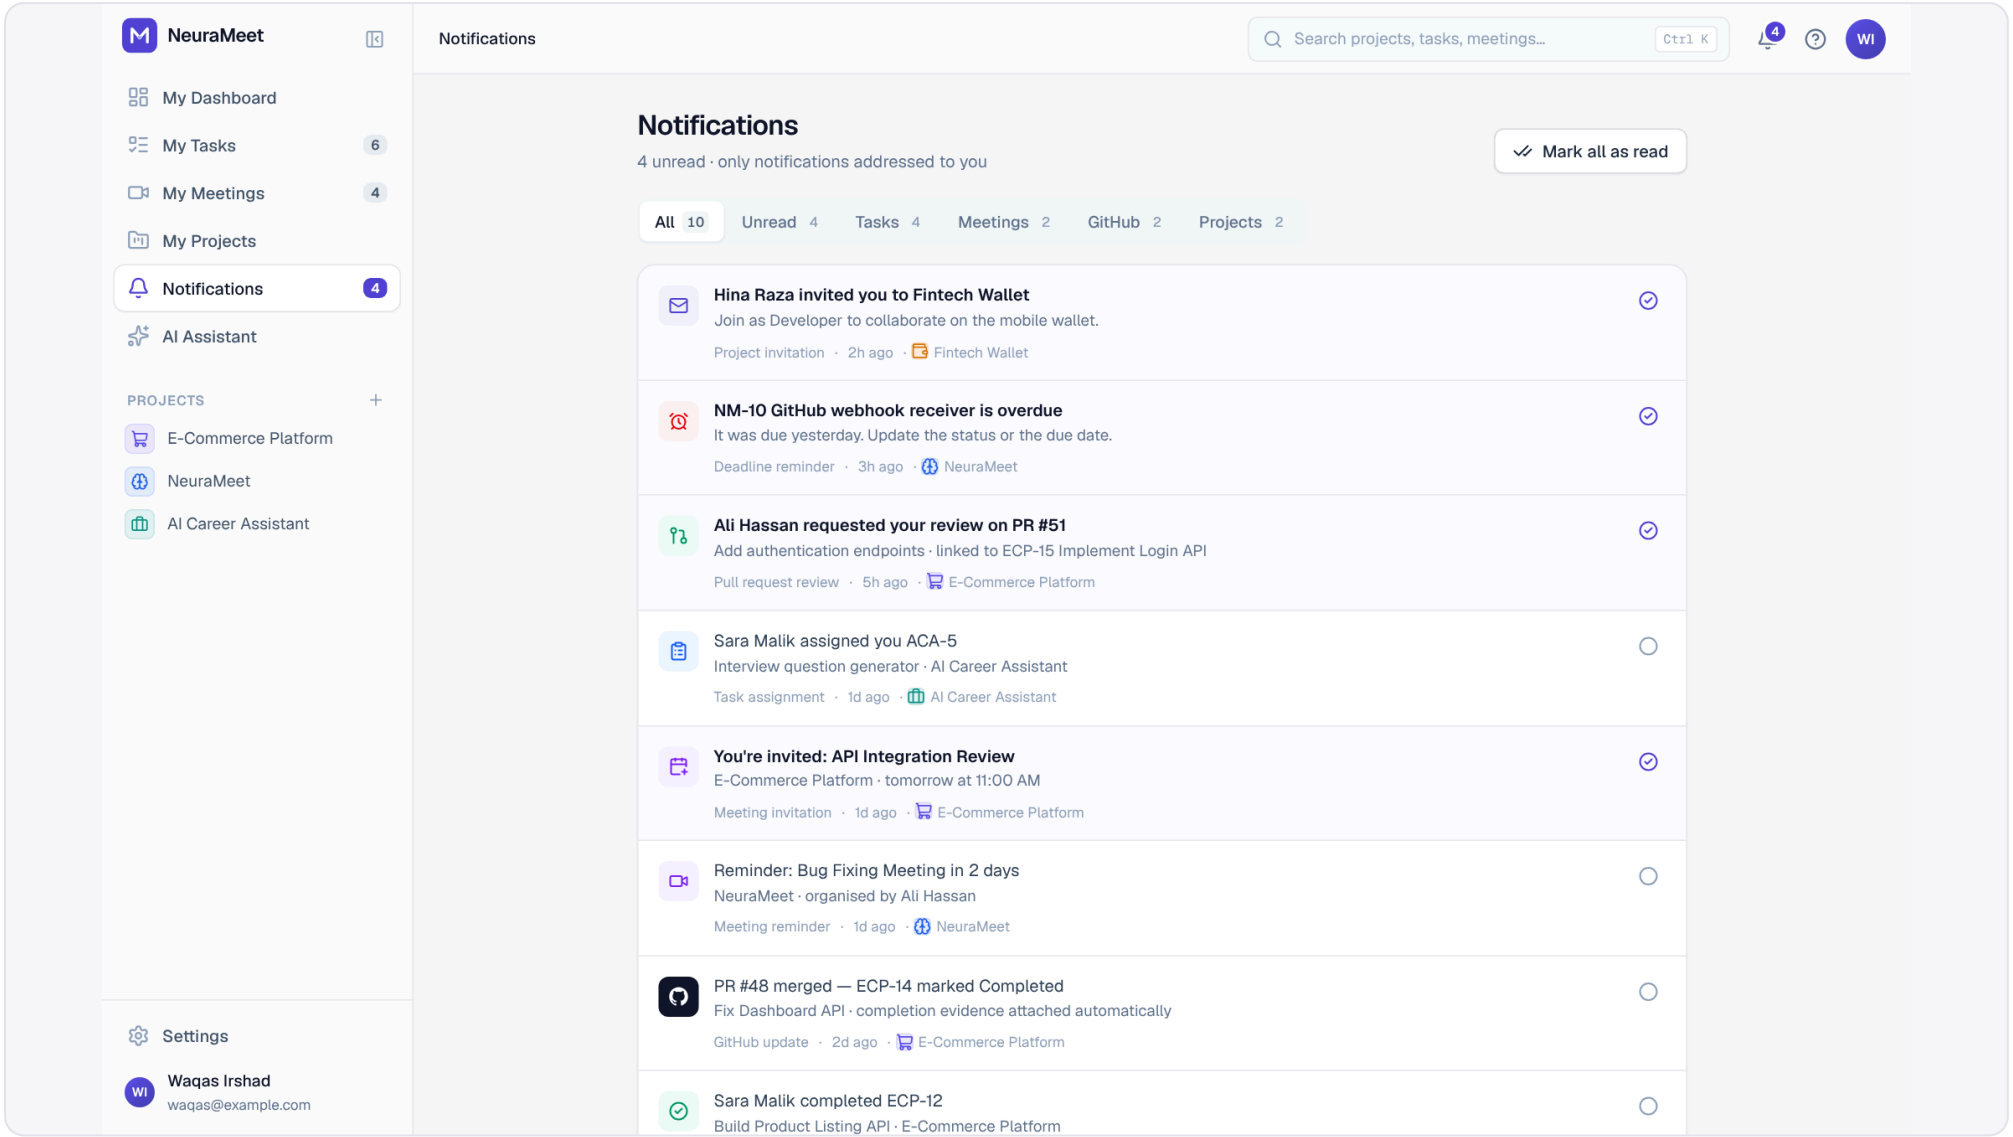

19 My Tasks

Personal list across all projects: All, To Do, In Progress, In Review, Completed and Overdue. Each task shows its project and opens the project task.

20 Notifications

Personal notification centre: invitations, assignments, deadlines, meeting invites and reminders, PR reviews, task completion and member changes. Filters, mark read/unread, mark all as read.

21 Settings · Connected Accounts

Account (password, email digest), notification preferences, appearance and connected accounts (GitHub connect/disconnect). My Profile is a separate page.
